

# High-function General-purpose Inverters

# RX Series V1 type

## Versatile for a Wide Range of Applications

- Double rating VT 120%/1 min and CT 150% /1 min.
- Drive Programming
- Fieldbus communications with optional unit  
EtherCAT, CompoNet™ and DeviceNet™
- Built-in EMC filter

## Performance Specifications

### Inverter 3G3RX-V1

# High-function General-purpose Inverters RX-Series V1 type

## Function Specifications

### Inverter 3G3RX-V1

Function name		Specifications	
Enclosure ratings		IP20 (0.4 to 55 kW) IP00 (75 to 132 kW)	
Control method		Phase-to-phase sinusoidal modulation PWM	
Output frequency range		0.1 to 400 Hz	
Frequency precision		Digital command: $\pm 0.01\%$ of the maximum frequency, Analog command: $\pm 0.2\%$ of the maximum frequency ( $25 \pm 10^\circ\text{C}$ )	
Frequency resolution		Digital setting: 0.01 Hz Analog setting: maximum frequency/4000 (Terminal FV: 12 bits/0 to +10 V), (Terminal FE: 12 bits/-10 to 10 V), (Terminal FI: 12 bits/0 to 20 mA)	
Voltage/Frequency characteristics		Heavy load rating (CT): V/f characteristics (constant torque, reduced torque, free V/f setting), sensorless vector control, 0-Hz sensorless vector control, sensor vector control Light load rating (VT): V/f characteristics (constant torque, reduced torque, free V/f setting), sensorless vector control	
Overload current rating		Heavy load rating (CT): 150%/60 s, 200%/3 s (180%/3 s for 75 kW or more) Light load rating (VT): 120%/60 s, 150%/5 s	
Instantaneous overcurrent protection		200% of the value of heavy load rating (CT)	
Acceleration/Deceleration time		0.01 to 3600 s (linear/curve selection)	
Speed fluctuation		Heavy load rating (CT): $\pm 0.5\%$ *1, *2 Light load rating (VT): $\pm 0.5\%$ *1	
Carrier frequency adjustment range		(For 0.4 to 55kW) Heavy load rating (CT): 0.5 to 15 kHz Light load rating (VT): 0.5 to 12 kHz (For 75 to 132kW) Heavy load rating (CT): 0.5 to 10 kHz Light load rating (VT): 0.5 to 8 kHz	
Starting torque	Sensor less vector control	(For 0.4 to 55kW) Heavy load rating (CT): 200%/0.3 Hz *1 Light load rating (VT): 150%/0.5 Hz *1 (For 75 to 132kW) Heavy load rating (CT): 180%/0.3 Hz *1 Light load rating (VT): 120%/0.5 Hz *1	
	0-Hz sensorless vector control	(For 0.4 to 55kW) Heavy load rating (CT): 150%/Torque at 0 Hz *3 Light load rating (VT): No function available (For 75 to 132kW) Heavy load rating (CT): 130%/Torque at 0 Hz *3 Light load rating (VT): No function available	
External DC injection braking		Operates when the starting frequency is lower than that in deceleration via the STOP command, when the frequency reference is lower than the operation frequency, or via an external input (braking power, time, and frequency are variable)	
Protective functions		Overcurrent protection, Overvoltage protection, Undervoltage protection, Electronic thermal protection, Temperature error protection, Momentary power interruption/Power interruption protection, Input phase loss protection, Braking resistor overload protection, Ground-fault current detection at power-on, USP error, External trip, Emergency shutoff trip, CT error, Communication error, Option error, etc.	
Input signal	Frequency settings	Standard Digital Operator	Setting via   keys
		External signal *4	0 to 10 VDC, -10 to 10 VDC (Input impedance: 10 k $\Omega$ ), 4 to 20 mA (Input impedance: 100 $\Omega$ )
		External port	Setting through RS-485 communications
	Forward or Reverse operation/Stop	Standard Digital Operator	RUN/STOP (Forward/reverse switched via parameter settings)
		External signal	Forward/Stop (Reverse/Stop available at the time of multi-functional input terminal allocation), 3-wire input available (at the time of control circuit terminal block allocation)
		External port	Setting through RS-485 communications
	Multi-function input *5	8 terminals, NO/NC switchable, sink/source logic switchable Heavy load (CT): 8 functions can be selected from among 72 Light load (VT): 8 functions can be selected from among 57	
Thermistor input terminal	1 terminal (Positive/Negative temperature coefficient of resistance element switchable)		
Output signal	Multi-function output *5	5 open collector output terminals: NO/NC switchable, sink/source logic switchable 1 relay (SPDT contact) output terminal: NO/NC switchable Heavy load (CT): 6 functions can be selected from among 55 Light load (VT): 6 functions can be selected from among 51	
	Multi-function monitor output terminal	Analog voltage output (0 to 10 V) *6, Analog current output (0 to 20 mA) *6, Pulse train output (maximum frequency 3.6 kHz)	
Display monitor		Output frequency, Output current, Output torque, Frequency conversion value, Trip record, I/O terminal status, Electric power, etc.	
Other functions		<ul style="list-style-type: none"> <li>Heavy load rating (CT) V/f free setting (7), Upper/lower frequency limit, Frequency jump, Curve acceleration/deceleration, Manual torque boost level/break, Energy-saving operation, Analog meter adjustment, Starting frequency, Carrier frequency adjustment, Electronic thermal function (free setting available), External start/end (frequency/rate), Analog input selection, Trip retry, Restart during momentary power interruption, Various signal outputs, Reduced voltage startup, Overload limit, Initialization value setting, Automatic deceleration at power-off, AVR function, Automatic acceleration/deceleration, Auto tuning (Online/Offline)</li> <li>Light load rating (VT) V/f free setting (7), Upper/lower frequency limit, Frequency jump, Curve acceleration/deceleration, Manual torque boost level/break, Energy-saving operation, Analog meter adjustment, Starting frequency, Carrier frequency adjustment, Electronic thermal function (free setting available), External start/end (frequency/rate), Analog input selection, Trip retry, Restart during momentary power interruption, Various signal outputs, Reduced voltage startup, Overload limit, Initialization value setting, Automatic deceleration at power-off, AVR function, Auto tuning (Online/Offline)</li> </ul>	

\*1 Applicable in the sensorless vector control

\*2 Applicable in the 0-Hz sensorless vector control

\*3 Applicable in the 0 Hz sensorless vector control when using a motor one size smaller in capacity than the inverter

\*4 The maximum frequency is set to 9.8 V for a voltage input of 0 to 10 VDC and to 19.8 mA for an current input of 4 to 20 mA, respectively. If this causes any inconvenience, change the default datas.

\*5 In the VT mode, the available functions are limited compared with the CT mode. The default setting and setting range of some functions also differ.

\*6 The analog voltage and current values for the multi-function monitor output terminals show values that can only be used as a guide for analog meter connection. The maximum output value may differ slightly from 10 V or 20 mA due to the variability of the analog output circuit. If this causes any inconvenience, refer to the RX series V1 type User's Manual. (Man.No.I578) to adjust the default settings.

# High-function General-purpose Inverters RX-Series V1 type

Function name		Specifications	
Operating environment	Ambient operating temperature	Heavy load rating (CT): -10 to 50°C Light load rating (VT): -10 to 40°C	
	Ambient storage temperature	-20 to 65°C	
	Ambient operating humidity	20% to 90% (with no condensation)	
	Vibration resistance *7	5.9m/s <sup>2</sup> (0.6G), 10 to 55Hz / 0.4 to 22kW 2.94m/s <sup>2</sup> (0.3G), 10 to 55Hz / 30 to 132kW	
	Application environment	At a maximum altitude of 1,000 m (without corrosive gases or dust) *8	
Options	PG Board	Sensor vector control 3G3AX-PG01	
	EtherCAT Communication Unit	3G3AX-RX-ECT	
	CompoNet™ Communication Unit	3G3AX-RX-CRT-E	
	DeviceNet™ Communication Unit	3G3AX-RX-DRT-E	
Other options		Braking Resistor, AC reactor, DC reactor, Digital Operator, Digital Operator cables, Noise filter, Regenerative braking unit, etc.	
International standard	EC Directive	EMC Directive	EN61800-3: 2004
		Low Voltage Directive	EN61800-5-1: 2003
	UL/cUL		UL508C

\*7 Complies with the test method specified in JIS C60068-2-6: 2010 (IEC 60068-2-6: 2007).

\*8 If the altitude is higher than 1,000 m, reduce the amount of heat generation because air density decreases by 1% with the increasing altitude by 100 m. For switching devices such as IGBTs, the amount of heat generation is proportional to the current flowing in the device and the applied voltage. Therefore, reduce the value of the rated current by 1% with the increasing altitude by 100 m to use a standard inverter. However, this is applicable to an altitude of 2,500 m or lower.

## Components and Functions

**Note:** Example of the 3G3RX-A2055-V1/A2075-V1/A2110-V1/A4055-V1/A4075-V1/A4110-V1

### Inverter 3G3RX-V1

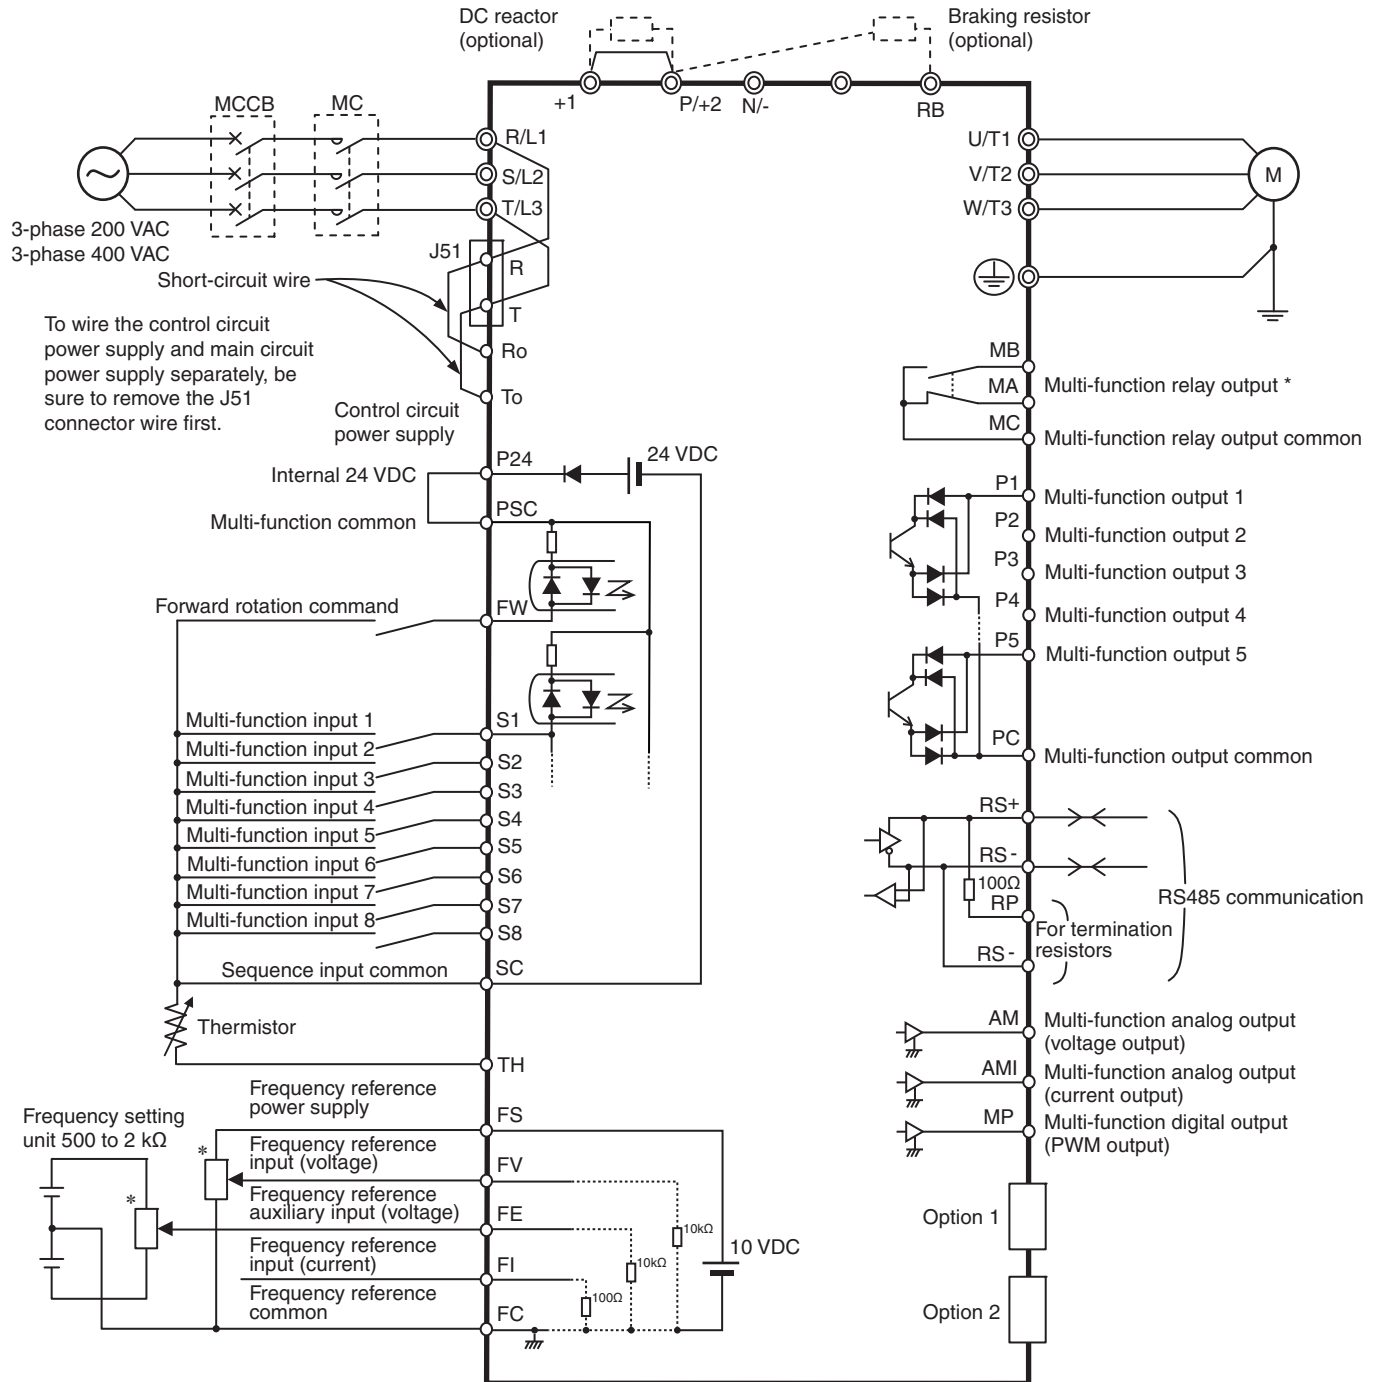

Open the terminal block cover to wire the main circuit terminal block and the control circuit terminal block. Moreover, you can open the front cover to mount option boards.

## Communication Unit

### RX-Series V1 type EtherCAT Communication Unit 3G3AX-RX-ECT

This is the communication unit to connect the High-function General-purpose Inverters RX-series V1 type to EtherCAT network. This communication unit passed the conformance test of EtherCAT.

- Note:**
1. It is not possible to use a EtherCAT Communication Unit 3G3AX-RX-ECT with a RX-series (Model without "-V1").
  2. Sysmac Studio can be used when using with NJ/NX-series Controller.  
To connect the NJ Controller, Sysmac Studio version 1.03 or higher is required.  
To connect the NX Controller, Sysmac Studio version 1.13 or higher is required.

### Common Specifications

Item		Specifications
Power supply		Supplied from the inverter
Protective structure		Open type (IP20)
Ambient operating temperature		-10 to 50°C
Ambient storage temperature		-20 to 65°C
Ambient operating humidity		20% to 90% RH (with no condensation)
Vibration resistance		5.9 m/s <sup>2</sup> (0.6 G), 10 to 55 Hz
Application environment		At a maximum altitude of 1,000 m (without corrosive gases or dust)
Weight		100 g max. (Shipping weight: approx. 200 g)
International standard	UL/cUL	UL508C
	EC Directives	EMC Directive : EN61800-3 Low Voltage Directive : EN61800-5-1

### EtherCAT Communications Specifications

Item	Specifications
Communications standard	IEC 61158 Type12, IEC 61800-7 CiA 402 drive profile
Physical layer	100BASE-TX (IEEE802.3)
Connector	RJ45 x 2 (shielded type) ECAT IN : EtherCAT input ECAT OUT : EtherCAT output
Communications media	Category 5 or higher (cable with double, aluminum tape and braided shielding) is recommended.
Communications distance	Distance between nodes: 100 m max.
Process data	Fixed PDO mapping PDO mapping
Mailbox (CoE)	Emergency messages, SDO requests, SDO responses, and SDO information
Distributed clock	FreeRun mode (asynchronous)
LED display	L/A IN (Link/Activity IN) x 1 L/A OUT (Link/Activity OUT) x 1 RUN x 1 ERR x 1
CiA402 drive profile	Velocity mode

### Dimensions (mm)

# High-function General-purpose Inverters RX-Series V1 type

## RX-Series V1 type CompoNet™ Communication Unit 3G3AX-RX-CRT-E

This is the communication unit to connect the High-function General-purpose Inverters RX-series V1 type to CompoNet™ network.

**Note:** It is not possible to use a CompoNet™ Communication Unit 3G3AX-RX-CRT-E with a RX-series (Model without "-V1").

### Common Specifications

Item		Specifications
Power supply		Supplied from the inverter
Protective structure		IP20
Ambient operating temperature		-10 to 50°C
Ambient storage temperature		-20 to 65°C
Ambient operating humidity		20% to 90% RH (with no condensation)
Vibration resistance		5.9 m/s <sup>2</sup> (0.6 G), 10 to 55 Hz
Application environment		At a maximum altitude of 1,000 m (without corrosive gases or dust)
Insulation resistance		500VAC (between isolated circuits)
Weight		100 g max. (Shipping weight: approx. 170 g)
International standard	UL/cUL	UL508
	EC Directives	EN61800-3 : 2004 (2004/108/EC) Second environment, Category C3 EN61800-5-1 : 2007 (2006/95/EC) SELV

### CompoNet™ Communications Specifications

Item	Specifications
Slave type	Word Slave Unit (Mixed)
Certification	CompoNet™ Conformance Tested
CompoNet™ Profile	AC Drive (0x02)
Communication power supply	--- (External power not required)
Node Address	0 to 63, set with inverter parameter P190 or the rotary switches.
Baud rates supported	4 Mbps, 3 Mbps, 1.5 Mbps, 93.75 kbps. Automatically detecting baud rate of Master Unit
Default Connection path	Supported, set with inverter parameter P046
Supported Assemblies	Basic Remote IO (Output assembly 20, Input assembly 70) Extended Speed IO (21, 71) Extended Speed and Torque Control (123, 173) Special IO (100, 150) Extended Control IO (101, 151) Extended Control IO and Multi function IO monitor (101, 153) Flexible Format (139, 159) Extended Speed and Acceleration Control (110, 111)
EDS file	Depending on the RX-series V1 type inverter model

### Dimensions (mm)

**Note:** After the CompoNet™ Communication Unit is installed, dimension D of the inverter increases by 35.1 mm. (Dimension D of the inverter varies depending on the capacity. Refer to the RX-series V1 type USER'S MANUAL (Cat.No.I578))

# High-function General-purpose Inverters RX-Series V1 type

## RX-Series V1 type DeviceNet™ Communication Unit 3G3AX-RX-DRT-E

This is the communication unit to connect the High-function General-purpose Inverters RX-series V1 type to DeviceNet™ network.

**Note:** It is not possible to use a DeviceNet™ Communication Unit 3G3AX-RX-DRT-E with a RX-series (Model without "-V1").

### Common Specification

### DeviceNet™ Communications Specifications

Item	Specifications
Certification	DeviceNet™ Conformance Tested
DeviceNet™ Profile	AC Drive (0x02)
Supported connections	Remote I/O: Master-Slave connection Poll Bit-Strobe COS Cyclic Explicit Messages Conform to DeviceNet™ specifications
Communication power supply	11 to 25VDC (MAX 50 mA, type 20 mA)
Unit device address range	MAC ID 0 to 63, set with inverter parameter P192
Baud rates supported	125, 250, or 500 kbps. Automatically detects baud rate of Master Unit.
Default Connection path	Supported, set with inverter parameter P046
Supported Assemblies	Basic Remote IO (Output assembly 20, Input assembly 70) Extended Speed IO (21, 71) Extended Speed and Torque Control (123, 173) Special IO (100, 150) Extended Control IO (101, 151) Extended Control IO and Multi function IO monitor (101, 153) Flexible Format (139, 159) Extended Speed and Acceleration Control (110, 111) In case the DeviceNet™ master is configured using user allocation, only the input /output pairs can be configured.
EDS file	Depending on the RX-series V1 type inverter model

### Dimensions (mm)

**Note:** After the DeviceNet™ Communication Unit is installed, dimension D of the inverter increases by 35.1 mm. (Dimension D of the inverter varies depending on the capacity. Refer to the RX-series V1 type USER'S MANUAL (Cat.No.1578))

# High-function General-purpose Inverters RX-Series V1 type

## Options

### Regenerative Braking Unit 3G3AX-RBU□□

Used with a Braking Resistor when the deceleration time of the motor is needed to be reduced in the 3G3RX.

#### Connection Example

\* The alarm output terminals for the Regenerative Braking Unit. Provide a circuit to turn off the primary power supply for the Inverter when the temperature relay of the built-in resistor or optional Braking Resistor is activated.

## Specifications

### Built-in Resistance Type (3G3AX-RBU21/-RBU22/-RBU41)

Class		3-phase 200-V class		3-phase 400-V class
Model name (3G3AX-)		RBU21	RBU22	RBU41*1
Connection resistance		17 Ω min.	17 Ω min.	34 Ω min.
Operating voltage ON/OFF		ON : 362.5 ± 5 V OFF: 355 ± 5 V (-5% or -10% setting available)		ON : 725 ± 5 V OFF: 710 ± 5 V (-5% or -10% setting available)
Operation indication		LED ON (Lit)		
Parallel interlocking operation function*2		5 units max.		
Built-in resistor	Internal resistance	120 W, 180 Ω	120 W, 20 Ω	120 W, 180 Ω × 2 in series
	Allowable consecutive ON time	10 s max.	0.5 s max.	10 s max.
	Allowable operation cycle	Cycle 1/10 (ON for 10 s, OFF for 90 s)	Cycle 1/80 (ON for 0.5 s, OFF for 40 s)	Cycle 1/10 (ON for 10 s, OFF for 90 s)
	Power consumption	Instantaneous 0.73 kW Short-time rating 120 W	Instantaneous 6.6 kW Short-time rating 120 W	Instantaneous 1.46 kW Short-time rating 240 W
Protective function	Built-in resistor overheat protection	<ul style="list-style-type: none"> <li>Cooling fin temperature Relay operates at approximately 200°C or higher. Recovers at approximately 170°C or lower.</li> <li>Built-in temperature fuse (recovery impossible)*3</li> <li>Rating of contact 250 V AC 200mA (R load) 12 V DC 500mA (R load) 42 V DC 200mA (R load)</li> <li>Minimum load 1mA (R load)</li> </ul>		
Operating environment	Ambient temperature	-10 to 50°C		
	Ambient storage temperature	-20 to 65°C		
	Ambient operating humidity	20% to 90% (with no condensation)		
	Vibration	5.9 m/s <sup>2</sup> (0.6G) 10 to 55 Hz		
	Location	At a maximum altitude of 1,000 m (without corrosive gases or dust)		
Paint color		Munselle 5Y7/1 (cooling fan: aluminum ground color)		

\*1 To use the braking resistor (Model: 3G3AX-RAB/RBB/RBC) for the 400-V class regenerative braking unit, be sure to remove the built-in resistor and connect two resistors of the same model in series. Using a 400-V class regenerative braking unit with only a single braking resistor connected may cause damage to the braking resistor.

\*2 Use DIP switches to set the number of connected units.

\*3 The built-in resistor has a thermal fuse. If the alarm terminals are not connected, the fuse may blow out in order to prevent the resistor from burning due to overheating. If the fuse blows out, the built-in resistor must be replaced.

## Specifications

### External resistor type (3G3AX-RBU23/-RBU24/-RBU42/-RBU43)

Class		3-phase 200-V class		3-phase 400-V class	
Model name (3G3AX-)		RBU23	RBU24	RBU42*1	RBU43*1
Discharge resistance	Continuous operation	6 Ω min.	4 Ω min.	24 Ω min.	12 Ω min.
	Short-time/ operation Allowable operation cycle/ Continuous ON time	4 Ω min.	2 Ω min.	10 Ω min.	6 Ω min.
		1/5 2 min	1/5 2 min	1/10 10 s	1/5 2 min
Operating voltage ON/OFF		ON: 362.5 ± 5 V OFF: 355 ± 5 V (-5% or -10% setting available)		ON: 725 ± 5 V OFF: 710 ± 5 V (-5% or -10% setting available)	
Operation indication		LED ON (Lit)			
Maximum number of units operating in parallel*2		2 units max.			
Protective functions	Internal power module overheat protection	Built-in relay specifications Cooling fin temperature Relay operates at approximately 100°C or higher.			
		<ul style="list-style-type: none"> <li>Rating of contact : 240 V AC 3 A (R load) 36 V DC 2 A (R load)</li> <li>Minimum load : 5 V DC 50 mA (R load)</li> </ul>			
Operating environment	Ambient temperature	-10 to 50°C			
	Ambient storage temperature	-20 to 65°C			
	Ambient operating humidity	20% to 90% (with no condensation)			
	Vibration	4.9 m/s <sup>2</sup> (0.5G) 10 to 55 Hz			
	Location	At a maximum altitude of 1,000 m (without corrosive gases or dust)			
Paint color		Munselle 5Y7/1 (cooling fan: aluminum ground color)			

\*1 To use the braking resistor (3G3AX-RAB/RBB/RBC) for the 400-V class regenerative braking unit, be sure to remove the built-in resistor and connect two resistors of the same model in series. Using a 400-V class regenerative braking unit with only a single braking resistor connected may cause damage to the braking resistor.

\*2 Use DIP switches to set the number of connected units.

## Braking Resistor 3G3AX-RBA/RBB/RBC□□□□

Consumes the regenerative motor energy with a resistor to reduce deceleration time.

### Connection Example

\* The alarm output terminals for the Braking Resistor. Provide a circuit to turn off the primary power supply for the Inverter when the temperature relay of the Braking Resistor is activated.

## Specifications

Model		Compact type (3G3AX-RBA□□□□)				Standard type (3G3AX-RBB□□□□)				Medium capacity type (3G3AX-RBC□□□□)		
		1201	1202	1203	1204	2001	2002	3001	4001	4001	6001	12001
Resistance	Capacity	120 W				200 W		300 W	400 W	400 W	600 W	1200 W
	Resistance (Ω)	180	100	50	35	180	100	50	35	50	35	17
Allowable braking frequency (%)		5	2.5	1.5	1.0	10	7.5	7.5	7.5	10		
Allowable continuous braking time (s)		20	12	5	3	30			20	10		
Weight (kg)		0.27				0.97		1.68	2.85	2.5	3.6	6.5
Fault detection function		Built-in thermal (Contact capacity: 240 V AC 2 A max.) Minimum current: 5 mA, Normally ON (NC contact) Built-in temperature fuse (recovery impossible)							Built-in temperature relay, Normally ON (NC contact) Contact capacity: 240 V AC 3 A (R load), 0.2 A (L load), 36 V DC 2 A (R load)			
General specifications	Ambient operating temperature	-10 to 50°C										
	Ambient storage temperature	-20 to 65°C										
	Ambient operating humidity	20% to 90% (RH) with no condensation										
	Vibration	5.9 m/s (0.6 G) 10 to 55 Hz Complies with JISC0911										
	Location	At a maximum altitude of 1,000 m (without corrosive gases or dust)										
Cooling method		Self-cooling										

\* Built-in resistors are equipped with thermal fuses. If the alarm is not connected, the fuse may blow to prevent burnout due to overheating. If the fuse blows, the built-in resistor will need to be replaced.

# High-function General-purpose Inverters RX-Series V1 type

## Radio Noise Filter 3G3AX-ZCL□

Connected to the inverter input/output cables to reduce noise coming into the inverter from the power supply line and noise flowing from the inverter into the power supply line.

### Connection Example

- Note 1: Wind each of three phase wires in the same direction.  
 2: Can be used on both the input and output sides of the Inverter.

# High-function General-purpose Inverters RX-Series V1 type

## EMC Noise Filter 3G3AX-EFI□□□

Separately installed option used to comply with the EC's EMC Directives. Select a filter appropriate for the Inverter model.

Although an EMC Noise Filter is built into the RX, it may be necessary to provide another EMC Noise Filter when the cable between the Motor and the Inverter is long.

### Connection Example

# High-function General-purpose Inverters RX-Series V1 type

## DC Reactor 3G3AX-DL□□□□

Used to suppress harmonic current generated from the Inverter.

Suppresses harmonic current better than the AC Reactor and can be used with the AC Reactor.

### Connection Example

## PG Board 3G3AX-PG01

The PG Board (3G3AX-PG01) is an optional board for the 3G3RX Series Inverter. With this board, you can realize highly accurate system operation with minimum speed fluctuation, and position control via pulse train position command input by detecting the rotation speed of the motor with an encoder and using the data for feedback.

### Connection Example

**Note:** For the terminal connection on the Inverter, refer to the Inverter RX series V1 type User's Manual (Man.No. I578).

## Specifications

Item		Specifications
Speed control	Encoder feedback	Standard number of encoder pulses: 1024 pulses/r Maximum input number of pulses: 100k pulses/s
	Speed control system	Proportional integral (PI)/ Proportional (P) control
Position control	Position command	<ul style="list-style-type: none"> <li>The pulse train can be input in three modes.                             <ul style="list-style-type: none"> <li>Mode 0: Pulse train with 90° phase difference</li> <li>Mode 1: Forward/Reverse command + Pulse train</li> <li>Mode 2: Forward pulse train + Reverse pulse train</li> </ul>                             The input mode depends on the Inverter setting.                         </li> <li>Maximum input number of pulses: 100k pulses/s</li> </ul>
	Electronic gear	<ul style="list-style-type: none"> <li>Pulse ratio A/B (A, B: 1 to 9999 can be set)</li> <li>Available setting range: <math>1/50 \leq A/B \leq 20</math></li> </ul>
Orientation	Stop position	• 4096 divisions per one motor rotation *
	Speed	• Orientation speed and rotation direction settings available
Protective functions		<ul style="list-style-type: none"> <li>Encoder cable disconnection protection</li> <li>Overspeed protection (Overspeed error detection level (P026))</li> <li>Positioning error</li> <li>3G3AX-PG connection error</li> </ul>

\* The inverter setting or external input is available.

# High-function General-purpose Inverters RX-Series V1 type

## Digital Operator

Used to set parameters, perform various monitoring, and start and stop the Inverter.

### 3G3AX-OP01

### Dimensions

Dimensions	Height (55 mm) × Width (70 mm) × Depth (10 mm)
------------	--

## Digital operator extension cable 3G3AX-OPCN□

Used to install the Digital Operator away from the Inverter.

3G3AX-OPCN1 (Cable length: 1 m)  
3G3AX-OPCN3 (Cable length: 3 m)

# High-function General-purpose Inverters RX-Series V1 type

## Regenerative Braking Unit and Braking Resistor Combination

Select the combination of the regenerative braking unit(s) and the braking resistor(s) as follows, according to your inverter. If the usage rate exceeds 10% ED, or if you need a torque larger than the approximate braking torque, you need to follow the instruction provided in Braking Resistor Selection.

- Inverter: Select the model of your inverter. However, the table below assumes that your inverter is used in the heavy load mode and connected to a single motor with the same capacity. Therefore, in the light load mode, a motor with the same capacity means a motor that is one size larger in capacity than the inverter and the converted braking torque decreases accordingly.
- Operating conditions: Show the torque during deceleration and the deceleration time (in % ED) calculated as a percentage of the cycle time for 1 cycle of operation including the stop time.
- Braking unit/Braking resistor: Show the required the model and number of units.
- Connection form: Show the configuration of the regenerative braking unit(s) and braking resistor(s) illustrated in the connection form table below.
- Restrictions: Show the maximum deceleration time allowable for the combination shown here and the minimum resistance that can be connected to the inverter's built-in regenerative braking circuit or external regenerative braking unit(s).

Voltage class	Inverter		Operating conditions		Braking unit		Braking resistor		Connection form	Restrictions	
	Max. applicable motor capacity (kW)	Model	%ED (%)	Approximate braking torque (%)	Model	Number of units	Model	Number of units		Allowable continuous braking time(s)	Min. connectable resistance (Ω)

\*1 Standard type cables length 0.2, 0.3, 0.5, 1, 1.5, 2, 3, 5, 7.5, 10, 15 and 20 m are available.

Rugged type cables length 0.3, 0.5, 1, 2, 3, 5, 10 and 15 m are available.

For details, refer to Cat.No.G019.

\*2 The lineup features Low Smoke Zero Halogen cables for in-cabinet use and PUR cables for out-of-cabinet use. Although the LSZH cable is single shielded, its communications and noise characteristics meet the standards.

\*3 Cables colors are available in blue, yellow, or Green.

\*4 For details, contact your OMRON representative.

## Software

### How to Select Required Support Software for Your Controller

The required Support Software depends on the Controller to connect. Please check the following table when purchasing the Support Software.

Item	Omron PLC System	Omron Machine Automation Controller System
Controller	CS, CJ, CP, and other series	NJ/NX-series
Inverter	Inverter RX-series V1 type Inverter RX-series V1 type with CompoNet™ Communication Unit Inverter RX-series V1 type with DeviceNet™ Communication Unit	Inverter RX-series V1 type with EtherCAT Communication Unit
Software	FA Integrated Tool Package CX-One (CX-Drive: Version 2.72 or higher)	Automation Software Sysmac Studio (Version 1.03 or higher)

### FA Integrated Tool Package CX-One

Product name	Specifications			Model
		Number of licenses	Media	
<b>FA Integrated Tool Package CX-One Ver.4.□</b>	The CX-One is a comprehensive software package that integrates Support Software for OMRON PLCs and components. CX-One runs on the following OS. Windows XP (Service Pack 3 or higher, 32-bit version) / Windows Vista (32-bit/64-bit version) / Windows 7 (32-bit/64-bit version) / Windows 8 (32-bit/64-bit version) / Windows 8.1 (32-bit/64-bit version) / Windows 10 (32-bit/64-bit version) CX-One Version 4.□ includes CX-Drive Ver.2.□. For details, refer to the CX-One catalog (Cat. No. R134)	1 license *	DVD	<b>CXONE-AL01D-V4</b>

\* Multi licenses (3, 10, 30, or 50 licenses) and DVD media without licenses are also available for the CX-One.

### Automation Software Sysmac Studio

Please purchase a DVD and required number of licenses the first time you purchase the Sysmac Studio. DVDs and licenses are available individually. Each model of licenses does not include any DVD.

Product name	Specifications			Model
		Number of licenses	Media	
<b>Sysmac Studio Standard Edition Ver.1.□□</b>	The Sysmac Studio is the software that provides an integrated environment for setting, programming, debugging and maintenance of machine automation controllers including the NJ/NX-series CPU Units, NY-series Industrial PC, EtherCAT Slave, and the HMI. Sysmac Studio runs on the following OS. Windows 7 (32-bit/64-bit version) / Windows 8(32-bit/64-bit version)/ Windows 8.1(32-bit/64-bit version)/ Windows 10 (32-bit/64-bit version) The Sysmac Studio Standard Edition DVD includes Support Software to set up Ether-Net/IP Units, DeviceNet™ slaves, Serial Communications Units, and Support Software for creating screens on HMIs (CX-Designer). For details, refer to your OMRON website.	- (Media only)	DVD	<b>SYSMAC-SE200D</b>
		1 license *	---	<b>SYSMAC-SE201L</b>

\* Multi licenses are available for the Sysmac Studio (3, 10, 30, or 50 licenses).

## Communications Cable

Name	Specifications	Model
Communications cable for CX-Drive	USB Cable for JX and RX series (2m)	<b>3G3AX-PCACN2</b>

## Overview of Inverter Selection

For detail of Inverter selection, refer to the RX series V1 type User's Manual. (Man.No.I578).

### Motor Capacity Selection

Before selecting an inverter, first the motor should be chosen. In selecting the motor, first calculate the load inertia for the applications, and then calculate the required capacity and torque.

### Make a simple selection (use Formulas for the required output power)

This method of calculation helps select a motor by calculating the output (W) required by the motor to maintain its regular rotations. It does not include calculation of the effect of acceleration/deceleration. Therefore, make allowance for the calculated value to select a motor. This calculation method can be applied to applications that operate constantly such as fans, conveyers, agitators etc.

This calculation method must not be applied to the following applications:

- Those requiring instant start-up.
- Those that frequently repeat operation and stop.
- Those that have a large inertia at the power transfer part.
- Those that have an inefficient power transfer part.

### ● For Straight-Line Operation: Normal Power PO (kW)

### ● For Rotating Operation: Normal Power PO (kW)

### Detailed Selection Method (R.M.S Algorithm)

This method helps to select a motor by calculating the effective torque and maximum torque required to achieve a certain pattern of operation for the application. It selects a motor that is optimal for a particular operation pattern.

### ● Calculate the inertia with a Motor Shaft Conversion Value

Calculate inertias of all the components with the formula for inertia calculation shown below to convert them to a motor conversion value.

$$J_w = J_1 + J_2 + J_3 + J_4 = \left( \frac{M_1 \cdot D_1^2}{8} + \frac{M_2 \cdot D_2^2}{8} \cdot \frac{D_1^2}{D_2^2} + \frac{M_3 \cdot D_1^2}{4} + \frac{M_4 \cdot D_1^2}{4} \right) \times 10^{-6} \text{ (kg-m}^2\text{)}$$

### ● Calculate Motor Shaft Conversion Torque and Effective Torque

Calculate the acceleration torque from the load torque calculated from both the motor shaft conversion value and the motor rotor inertia. Then Combine this acceleration torque and the Load torque calculated from the friction force and the external force that are applied to the load. Now you get the required torque to operate a motor.

#### Acceleration Torque

#### Motor Shaft Conversion Load Torque (External Force/Friction)

# High-function General-purpose Inverters RX-Series

## • Calculation of Total Torque and Effective Torque

Effective Torque:  $T_{RMS}$  (N·m)

$$= \sqrt{\frac{\sum (T_i)^2 \cdot t_i}{\sum t_i}} = \sqrt{\frac{T_1^2 \cdot t_1 + T_2^2 \cdot t_2 + T_3^2 \cdot t_3 + T_4^2 \cdot t_4}{t_1 + t_2 + t_3 + t_4}}$$

Maximum Torque:  $T_{MAX} = T_1 = T_A + T_L$

**Note:** Please make use of the Servo Motor selection software, which can calculate the motor shaft conversion inertia and effective/maximum torque, as above.

## ● Motor Selection

Use the formula below to calculate the motor capacity from the effective torque and the maximum torque that were obtained above. Select the larger of the two generated values as the motor capacity. Select a motor the capacity of which is larger than the calculated value and makes allowance for an error.

### • Motor Capacity corresponding to Effective Torque

$$\text{Motor Capacity (kW)} = 1.048 \cdot N \cdot T_{RMS} \cdot 10^{-4}$$

N: Maximum Rotations (r/min)

### • Motor Capacity capable of Providing Maximum Torque

$$\text{Motor Capacity (kW)} = 1.048 \cdot N \cdot T_{MAX} \cdot 10^{-4} / 1.5$$

N: Maximum Rotations (r/min)

## Inverter Capacity Selection

Select an inverter that can be used for the selected motor in the process of "Motor Selection".

Generally, select an inverter which fits the maximum applicable motor capacity of the selected motor.

After selecting an inverter, check if it meets with all of the following conditions. If it does not, select an inverter that has a one class larger capacity and check the feasibility again.

**Motor Rated Current ≤ Inverter Rated Output Current**  
**Maximum Time of Continuous Torque Output Time in an Application ≤ 1 minute**

- Note:**
1. Where the inverter overload capacity is "120% of Rated Output Current for 1 minute", check it for 0.8 minute.
  2. Where a 0 Hz sensor-less vector control is being used, or where torque must be maintained for 0 (r/min) rotation speed and where 150% of the rated torque is frequently required, use an inverter which is one rank larger than the one selected by the above method.

## Outline of Braking Resistor Selection

### Importance of Braking Resistor

If the regenerative energy generated in deceleration or descent in an application is too great, the main circuit of an inverter may have an increased voltage and it may be damaged.

Because the inverter usually contains the overvoltage LAD stop function, it is not actually damaged. However, the motor stops detecting an error, making a stable and continuous operation disabled. Therefore, you must discharge the regenerative energy outside of the inverter.

#### ● What is Regenerative Energy?

A load connected to a motor has kinetic energy when rotating, and potential energy when it is located in a high position. When the motor decelerates, or when the load descends, the energy is returned to an inverter. It is known as regeneration, and the energy generated by the phenomenon is known as regenerative energy.

#### ● Preventing Braking Resistance

The following are methods to prevent the connection of braking resistance.

These methods will make the deceleration time increase, so check if it will not cause problems.

- Enable the deceleration stall prevention (enabled in factory settings) (It will automatically increase deceleration time not to cause an overvoltage to stop the motor).
- Set a longer deceleration time. (Cause the regenerative energy to decrease per unit of time.)
- Disable Free-Run. (Prevent the regenerative energy from returning to an inverter.)

### Make a Simple Selection for Braking Resistors

It can be a simple selecting method by using the ratio of time in which regenerative energy is produced in a normal operating pattern. Calculate the usage ratio from the following operating pattern.

$$\text{Usage Rate} = t/T \times 100 (\% \text{ ED})$$

t : Deceleration Time (Regenerative Time)

T : Single Cycle Operation Time

%ED is the unit used for a usage rate.

The usage rate is used as the ratio of deceleration time (regenerative operation time) to simplify the selection of the braking options.

#### ● For Models with a Built-in Braking Circuit (3G3RX Max. 22 kW)

Select the braking resistor based on the usage rate calculated from the operation patterns.

Refer to the braking resistor list described in the User's manual and catalog, and connect it according to your Inverter.

#### ● For Models without a Built-in Braking Circuit (3G3RX Min. 30 kW)

Select the regenerative braking unit and the braking resistor. Refer to the regenerative braking unit and braking resistor lists described in the User's manual and catalog, and connect them according to your Inverter.

# High-function General-purpose Inverters RX-Series

When the usage ratio for the braking resistor selected on the previous page exceeds 10% ED, or when an extremely large braking torque is required, use the method below to calculate a regenerative energy and make your selection.

## ● Calculation of Required Braking Resistor

$$\text{Breaking Resistance Resistor: } R \leq \frac{V^2}{1.048 \times (T - 0.2 \times T_m) \times N \times 10^{-1}}$$

V: 200V class inverter 385 (V)

400V class inverter 760 (V)

T: Maximum Braking Torque (N·m)

$T_m$ : Motor Rated Torque (N·m)

N: Maximum Rotation Speed (r/min)

**Note:** Calculate a braking torque using the above "Motor Capacity Selection".

## ● Calculation of Average Regenerative Energy

Regenerative Energy is produced when the motor rotation direction and the torque direction are opposite.

Use the following formula to calculate a regenerative energy per cycle interval.

**Note:** 1. Forward rotation direction is forward for the speed, and the torque in the forward rotation direction is forward for the torque.  
 2. Calculate a braking torque using the above "Motor Capacity Selection".

## ● Braking Resistor Selection

Select a Braking Resistor from the required braking resistance and average regenerative energy on the left.

- Required Braking Resistance  $\geq$  Resistance of Braking Resistor  $\geq$  Minimum Connection Resistance of Inverter or Regenerative Braking Unit
- Average Regenerative Energy  $\leq$  Permissible Power for Braking Resistor

- Note:** 1. If a resistance that has a less than the minimum connectable value is connected on an inverter or regenerative braking resistor unit, the internal braking transistor can be damaged. When the required braking resistance is less than the minimum connectable resistance, change the inverter or regenerative energy braking to the one having a larger capacity and a minimum connection resistance less than the required braking resistance.
2. Two or more regenerative braking units can be operated in parallel. Refer to the following formula to know the braking resistance value in such a case.  
 Braking Resistance( $\Omega$ ) = (Required Braking Resistance as calculated above)  $\times$  (No. of Units in use)
3. Do not use the above formula to select a generative braking resistance value. 150W does not reflect a permissible power capacity, but the maximum rated power per unit of resistance. The actual permissible power varies according to a resistance.

## **READ AND UNDERSTAND THIS CATALOG**

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

## **WARRANTY**

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

## **LIMITATIONS OF LIABILITY**

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

## **SUITABILITY FOR USE**

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customer's application or use of the product.

At the customer's request, OMRON will provide applicable third party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the end product, machine, system, or other application or use.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses listed may be suitable for the products:

- Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this document.
- Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installations subject to separate industry or government regulations.
- Systems, machines, and equipment that could present a risk to life or property.

Please know and observe all prohibitions of use applicable to the products.

NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

## **PERFORMANCE DATA**

Performance data given in this document is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON Warranty and Limitations of Liability.

## **CHANGE IN SPECIFICATIONS**

Product specifications and accessories may be changed at any time based on improvements and other reasons.

It is our practice to change model numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the product may be changed without any notice. When in doubt, special model numbers may be assigned to fix or establish key specifications for your application on your request. Please consult with your OMRON representative at any time to confirm actual specifications of purchased products.

## **DIMENSIONS AND WEIGHTS**

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

## **ERRORS AND OMISSIONS**

The information in this document has been carefully checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical, or proofreading errors, or omissions.

## **PROGRAMMABLE PRODUCTS**

OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.

## **COPYRIGHT AND COPY PERMISSION**

This document shall not be copied for sales or promotions without permission.

This document is protected by copyright and is intended solely for use in conjunction with the product. Please notify us before copying or reproducing this document in any manner, for any other purpose. If copying or transmitting this document to another, please copy or transmit it in its entirety.

**Note:** Do not use this document to operate the Unit.
