### Multi-function Compact Inverter MX2-Series CompoNet Communication Unit

#### Support for open network

- The MX2 series V1 type and RX series V1 type\* can be connected to CompoNet by mounting the Communications Unit. \* Supported for the MX2 series Ver.1.1 or higher.
  - Not Supported for the RX series without V1 type.

#### 8 types of remote I/O higher functions

- 8 types of remote I/O functions that exchange I/O data automatically without program are provided.
  - All of the following functions of the inverter can also be used.
  - Simple positioning control
  - Torque control
     Setting of acceleration/deceleration time etc.

#### Parameter Edit via CompoNet

 Parameters of the inverter can be edited via CompoNet communication by using CX-Drive, support tool of inverter/servo drive. No tool switching required.
 \* Supported for CX-Drive Ver.2.6 or higher.

MX2-Series V1 type CompoNet Communication Unit

3G3AX-MX2-CRT-E

RX-Series V1 type CompoNet Communication Unit

3G3AX-RX2-CRT-E

## W CompoNet Slave Sensor Communication Unit

- Reliable and high-speed communication
   Present value can be checked as needed.
- Setting can be changed and tuning can be performed via the network.
- Wiring is reduced by supplying power from the communications power supply.

#### Various sensors can be connected

CompoNet Slave Sensor Communication Unit E3X-CRT

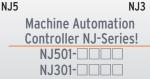

- Fiber amplifier, laser amplifier, and
- proximity amplifier can be connected.
- Connection by sliding the special sensor without wiring.

## **CompoNet Gateway Unit for CC-Link**

## Support for Machine Automation CC-Link links with CompoNet to expand system "easily" and "flexibly"

```
CompoNet Gateway Unit
for CC-Link
GQ-CRM21
```

**Reliable connection** 

• Error can be checked with the digital display of GQ-CRM21 on the site.

• Connect/communications error flags are transmitted. Error can be processed with the host program.

"CC-Link" is a registered trademark of Mitsubishi Electric Corporation.

Inverter

The drastic changes to the environment faced by today's manufacturing industry has led a wide range of issues such as the standardization of system infrastructure and the shift to more advanced functions. In order to solve these issues, it is necessary to share on-site data, such as for product quality and how to respond to changes in the enviroment, to vertically start up devices utilizing this data and execute preventive maintenance universally and quickly. That is why attention is focusing on utilizing globally standardized "open networks" in the plant management layer, the control layer, and the device layer.

## "CompoNet" globally standardized open network in the sensor & actuator layer ——「CompoNet」——

#### **Global standards**

· IEC 62026-7 ed1.0 published

· Chinese National Standards GB Scheduled to published in 2014

· Japanese Industrial Standards JIS published in November 2013

CompoNet is the latest sensor & actuator layer open network. It was introduced and its specifications given by ODVA \*1 in 2006.

This open network fuses CIP network technology \*2 and high-level communications technology that consolidates the know-how for reducing the amount of wiring developed over many years at actual manufacturing sites. It was established and released as the International Standard IEC 62026-7 ed1.0 in December 2010.

CompoNet attains the industry's fastest class of communications, 1000 I/O signals per 1 ms between connected devices and the controller and provides a high-performance network environment never seen before.

The open network means reduced device costs, improved functions, the quality of procurement on a global level, and standardization turns design know-how into assets.

With the rapid expansion of family devices by many control equipment makers in Japan and overseas, CompoNet is establishing a multi-vendor environment that is a truly global open network.

- \*1 The abbreviation for Open DeviceNet Vendor Association, a non-profit organization in the United States. ODVA supports networks based on CIP technology and is run by the main vendors inside and outside Japan. It has active bases in America, Europe, China, South Korea, and Japan.
- \*2 CIP is the abbreviation for Common Industrial Protocol. This is a protocol that enables communications between open networks of equipment from multiple vendors. Control of each piece of equipment, programming, data collection, etc. can be standardized free of any restrictions due to the network type of differences among equipment.
- Note: CompoNet, DeviceNet, and EtherNet/IP are registered trademarks of ODVA. ODVA Website:http://www.odva.org/

The conventional fast communication networks exceeding 10 Mbps must use special cables, which place restrictions on wiring. For example, they do not allow the connecting of branches.

In order to be able to use regular cables with their easier wiring, the only choice is a low baud rate network. With conventional field networks, achieving a "high-speed" while maintaining "ease of wiring", "informatization", and "low cost" is difficult. CompoNet achieves these competing conflicting objectives thanks to the latest technology for raising the efficiency of communication lines. CompoNet makes it possible to construct the manufacturing systems of the near future.

**DeviceNet** 

EtherNet/IP

# Fast Communication

# CompoNet

## solves the problems of conventional field networks!

Wiring Superior branching

# Informatization

# Simple and Low-Cost

Simple installation and regular cables mean lower cost

### Fast Communication Fast multipoint communication reduces takt times

#### Fastest class Communication Speeds in the Industry

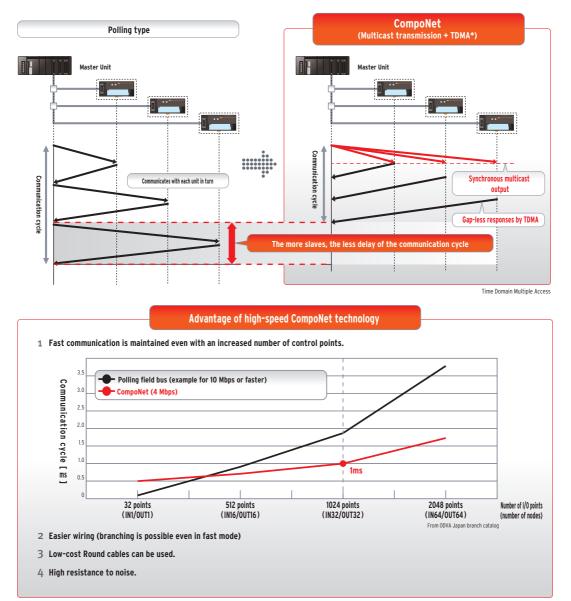

Provides the fastest communication speeds in the industry for a sensor-actuator level network.

It is possible to send data consisting a large number of control points on multiple nodes. There is no response time delay, even with repeater units.

#### Fast Communication Technology even at Low Baud Rate of 4 Mbps

Provides excellent performance in applications with large numbers of control points and also in expansion work. Efficient multicast transmission enables stable and fast communication even when the number of slaves increases.

## Wiring

Superior branching adaptability reduces wiring work

SD RD

Mg

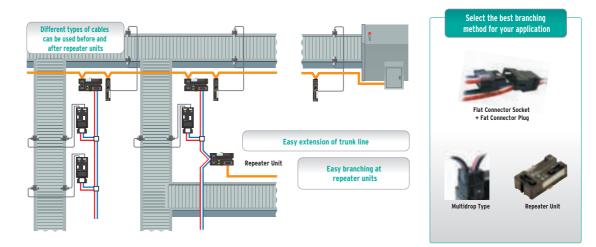

#### Flexible Installation

#### Select the best branching method for your application.

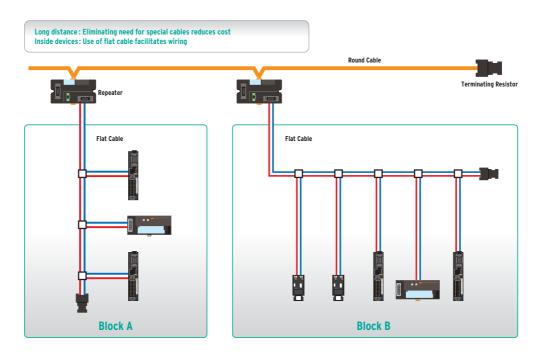

CompoNet provides both fast communication and easy wiring. Branch wiring is a powerful tool for installing large numbers of slaves in a variety of locations. You can optimize your cable layout to match the layout of your equipment.

#### Distance can easily be extended.

A maximum distance of 1500 m is possible (when baud rate is 93.75 kbps).

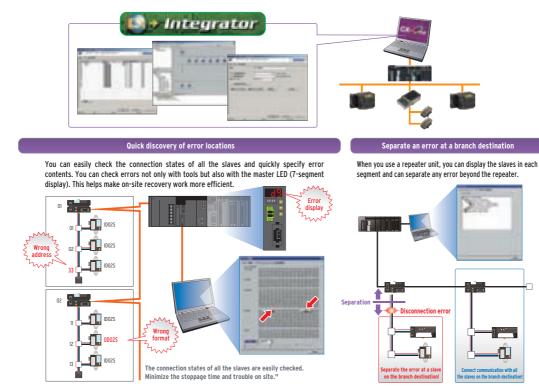

#### Different types of cables can be mixed.

### Informatization Reducing the start-up time and maintenance work with informatization

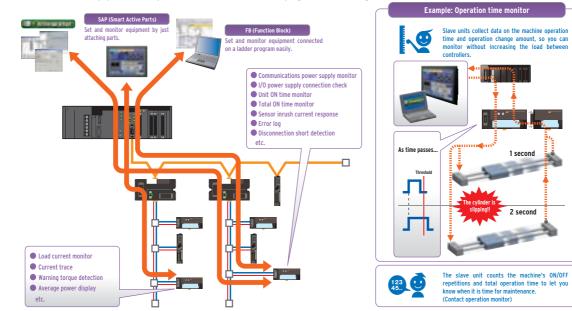

#### CX-Integrator Makes Start-Up and Recovery Work More Efficient

CX-Integrator software lets you set the PLC network/serial communication system configuration from a computer. CX-Integrator makes it easy to handle CompoNet assignment, parameter setting, connection state monitoring, comment setting, network diagnosis, etc. from a computer.

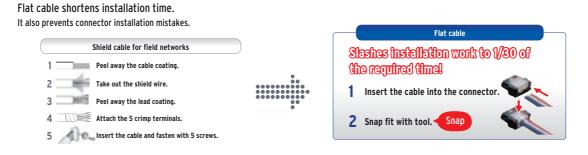

#### Informatization of the all Equipment

Smart features are features of the slave main units that collect a variety information used for from start-up to maintenance. Monitor network power supply voltage with tools and display units. Slaves collect a variety of information helpful for preventive maintenance and detect errors in connected equipment before problems occur. No need to write a program for monitoring.

## Simple and Low-Cost Slashes start-up workload and equipment cost!

#### Flat Cable for Easy One-Touch Installation

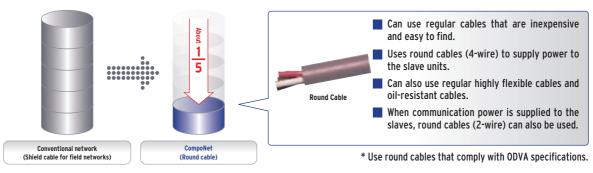

#### Smooth Start-Up with Simple Setup

Just set the master baud rate and the slave node addresses and the system is ready for start-up. The slave baud rate is automatically set to match the master unit baud rate. The allocation areas are automatically set by the node addresses. Rotary switch used Easy-to-understand decimal switch

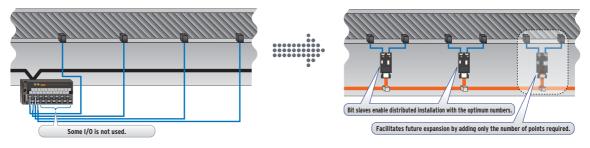

#### Can Use Regular Round Cables for Fast Communication

Regular round cables can be used as the communication cables.

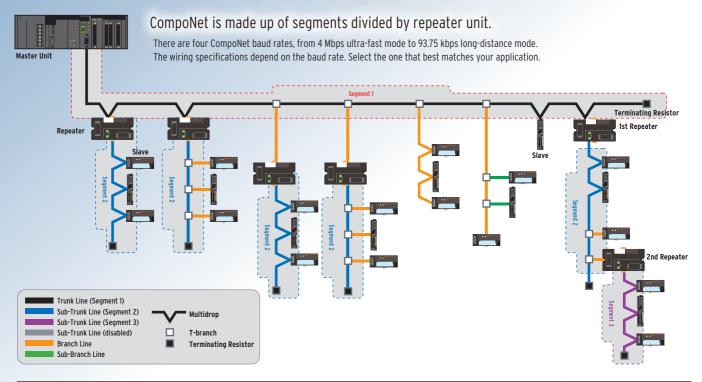

#### Bit-level distribution for effective I/O installation

Bit slaves enable optimum I/O configuration and wiring becomes more efficient.

## **Network Specifications**

Baud ra	te	Cable type Trunk line and sub-trunk line length (When 2 repeaters are used.)		Number of slaves per segment (Including number of repeaters)	Branch line length	Total branch line length per segment	Branch location restrictions	Number of slaves per branch line	Sub-branch line length	Total sub-branch line length per segment	
4Mbp:	5	Round cable I, II Flat cable I		30m (90m)	32	_	_	_	_	_	_
3Mbp:	5	Round cable I, II Flat cable I		30m (90m)	32	0.5m	8m	3/meter	1	_	_
		Round	Without branches	100m (300m)	32	—	—	—	—	—	-
1 546-		cable I	With branches	30m (90m)	32	2.5m	25m	3/meter	3	—	—
1.5Mbps	15		cable II cable I	30m (90m)	32	2.5m	25m	3/meter	3	0.1m	2m
93.75kbps		Round cable I		500m (1500m)	32	6m	120m	3/meter	1	—	—
	ops		cable II cable I	200m (600m)	32		20	0 meter free wiring tot	al wire length per segm	ent	

#### Relation between Baud Rate and Communications Cable

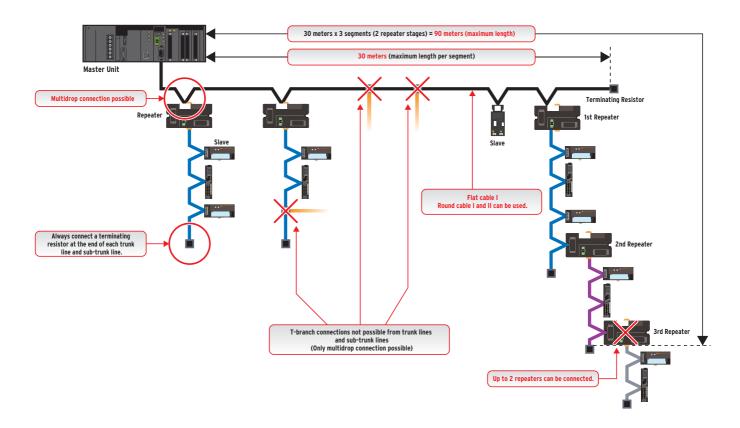

The Cable that can be used and the required baud rates are automatically determined by whether a trunk line-branch line formation or an unrestricted wiring formation is used.

	Baud rate					
Cable type	4Mbps	3Mbps	1.5Mbps	93.75kbps		
Round cable I				Trunk line-branch line wiring formation		
Round cable II	Trunk line-branch line wiring formation (See note 1.)	Trunk line-branch line wiring formation	Trunk line-branch line wiring formation			
Flat cable I		-		Unrestricted wiring formation		

Note: (1) If a baud rate of 4 Mbps is used, branching is not possible from the trunk line. (Only multidrop connections are possible.)

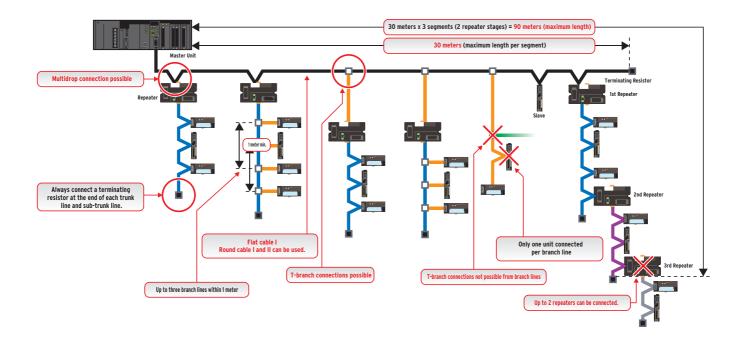

#### The following table shows the conditions and restrictions for each formation.

	Wiring formation				
Item	Trunk line-branch line formation	Unrestricted wiring formation			
Master Unit location	End of network	Anywhere in network (not necessarily at the end)			
Maximum number of Slave Units connected to any one branch line	1 or 3 depending on the cable type and baud rate	No restrictions			
Terminating Resistor location	On the opposite ends of the trunk line and all sub-trunk lines from the Master Unit and each Repeater Unit	On the most remote ends from the Master Unit and each Repeater Unit			

#### Example of wiring for 4Mbps (Application: Ultra-fast communications)

Example of wiring for 3Mbps (Application: Fast communications with branching)

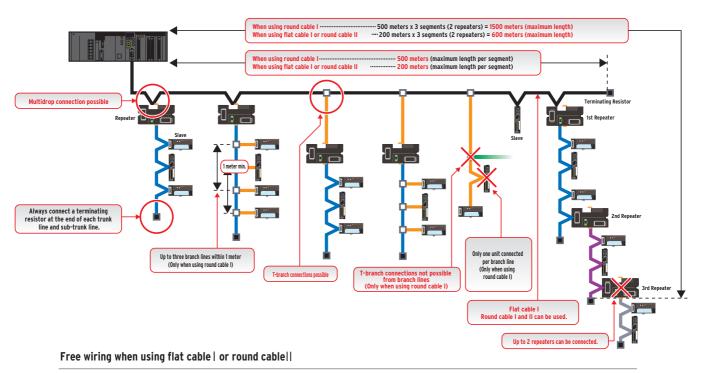

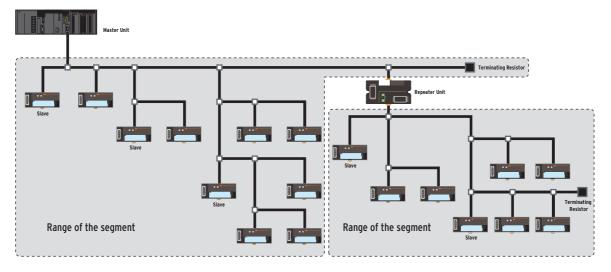

Example of wiring for 1.5 Mbps (Application: Balance of fast communications and branching)

Example of wiring for 93.75 kbps (Application: Long-distance wiring and free wiring)

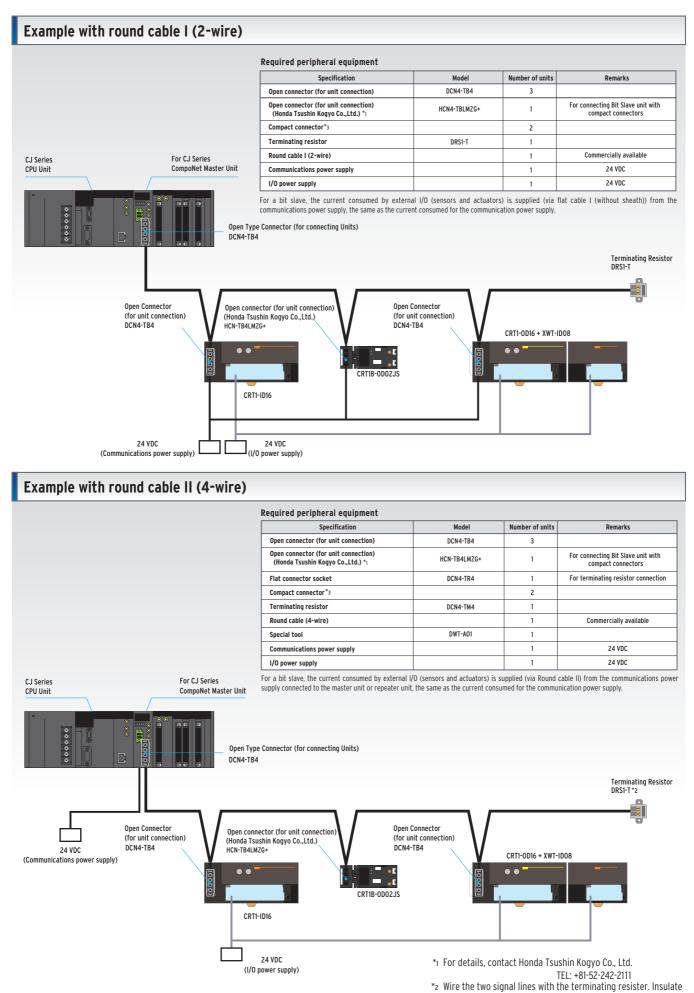

#### Example using round cable I

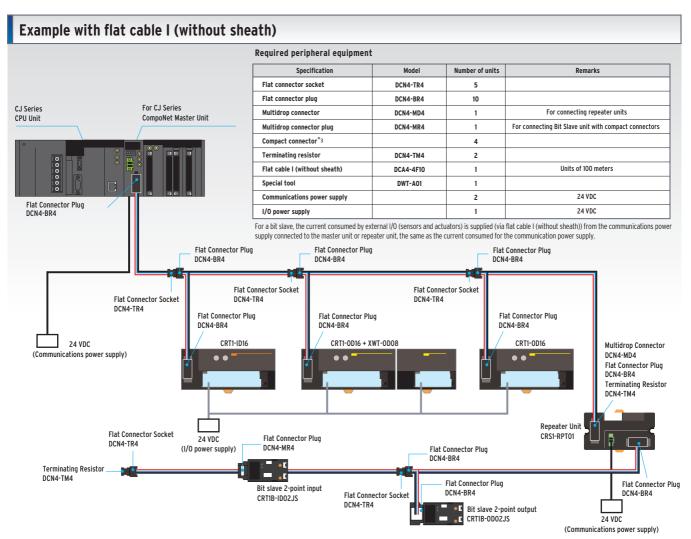

With this wiring formation, there is no distinction between the trunk line and branch lines. There are no wiring restrictions as long as the total cable length does not exceed 200 m. There is also no limit in the number of branches.

## **Configuration Examples and Peripheral Devices**

the power lines using tape or other insulating materials.

#### \*3 Compact Connectors

The compact connectors use XA-series Connectors from JST Mfg. Co., Ltd. Special cable connectors must be attached for cables connecting to externaldevices if a Slave Unit with Compact Connectors is used.

	Name		Applicable cable range			Online test

Housing	—		—			—

Note (I) Automated Crimp Tools are also available. For details, contact the manufacturer. (2) For information on the processing procedure, refer to the instruction manualincluded with the tool or contact the manufacturer (JST Mfg. Co., Ltd.).

## **Application Examples**

## CompoNet Applications for Every Type of Manufacturing Site

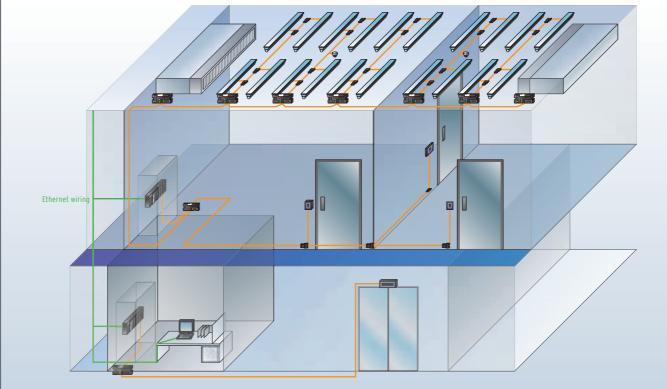

These applications offer high-performance communication and superior installability that aid in reducing takt times and cutting down the work of start-up and maintenance. Customers use CompoNet in a wide variety of applications.

#### **Building automation**

#### Advantages of introduction

- ▶ Wiring distance up to 1500 meters.
- Round cables can be used.
- Plenty of connection capacity even for distributed installation.
- ▶ High resistance to noise.

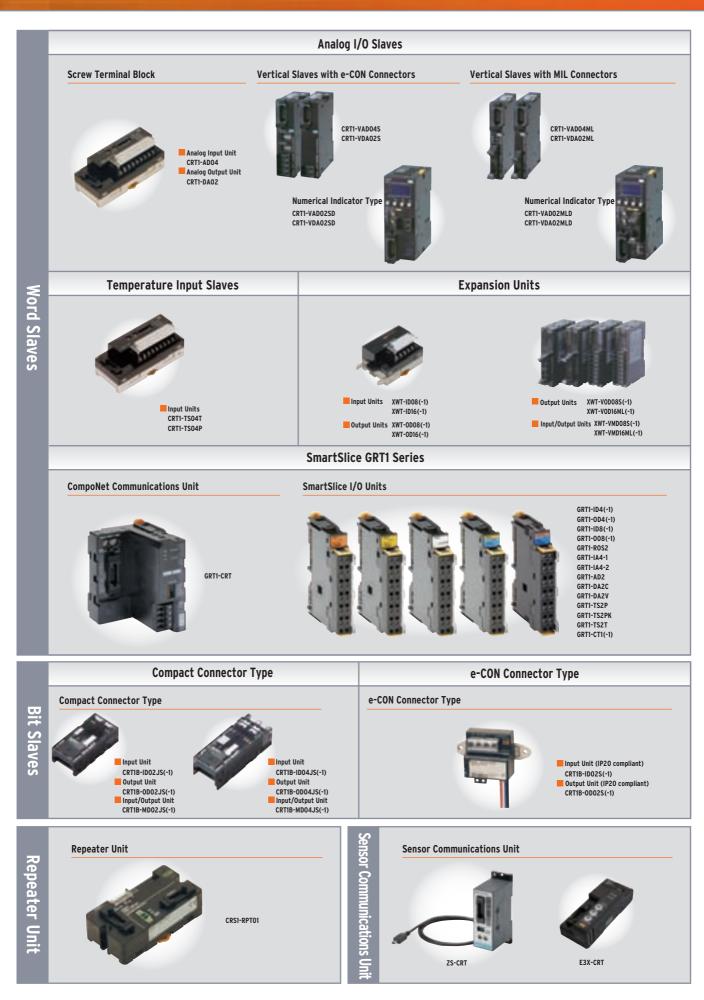

CompoNet allows high speed communications and bit-level distribution. It is usable by various applications.

## **Product Introductions**

## **Product Introductions**

- \*1 Open Type Connectors (DCN4-TB4) are notconnectable with Bit Slave Units whose connectors are small. Use connectors made by Honda Tsushin Kogyo instead.
- \*2 Multidrop Connectors (DCN4-MD4) are not connectable with Bit Slave Units with Compact Connectors. Use Multidrop Connector Plugs (DCN4-MR4) instead.

#### **Compact Connectors**

The compact connectors use XA-series Connectors from JST Mfg. Co., Ltd. Special cable connectors must be attached for cables connecting to externaldevices if a Slave Unit with Compact Connectors is used.

	Name			Applicable cable ra	inge		Administry Tool
