DeviceNet Today More Than Ever, DeviceNet Continues

Support for Machine Automation Controller NJ-Series!

Support for open network

The MX2 series/ MX2 series V1 type/ RX series V1 type* can be connected to DeviceNet by mounting the Communications Unit.

* Supported for the MX2 series Ver.1.1 or higher. Not Supported for the RX series without V1 type.

Parameter Edit via DeviceNet

Parameters of the inverter can be edited via DeviceNet communication by using CX-Drive*, support tool of inverter/servo drive. No tool switching required.

* Supported for CX-Drive Ver.2.6 or higher.

8 types of remote I/O higher functions

8 types of remote I/O functions that exchange I/O data automatically without program are provided. All of the following functions of the inverter can also be used.

Simple positioning control
Torque control
Setting of acceleration/deceleration time etc.

MX2 series V1 type DeviceNet Communication Unit 3G3AX-MX2-DRT-E

RX series V1 type DeviceNet Communication Unit 3G3AX-RX-DRT-E

Linking the World. A Global Open Network Greater Wiring Reduction, Standardization, on a Global Scale.

- Pr

What Is DeviceNet?

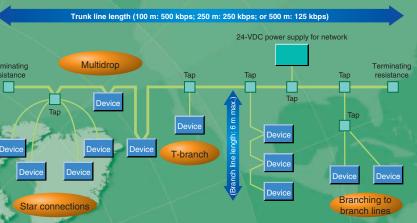

DeviceNet is a field network that easily performs mutual connections between control devices, such as PLCs, computers, and sensors, as well as data devices, such as barcode readers and RFID Systems. DeviceNet is a standardized network that enables intelligent control of field devices and improves system productivity.

Used Worldwide. and IT Technology at Manufacturing Sites

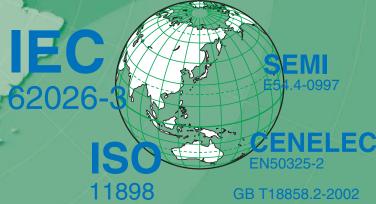

Superior installation performance enables easy and flexible wiring and layout.

DeviceNet covers a wide array of FA applications, ranging from the sensor or device level to the controller level. With its superior installation performance, DeviceNet easily achieves mutual connections between sensors and other control devices in one network as well as reducing costs and shortening lead time in many aspects of manufacturing, ranging from design and manufacture of equipment and lines to installation, operation, and maintenance.

Accelerating the Global Standardizations Required by Industry in This Age of Global Manufacturing

DeviceNet has been the leader in standardization required for this age of borderless manufacturing as a standard for a variety of countries and industrial organizations, such as with standard sensor bus certification by the SEMI industrial association and compliance with IEC, an international global standard. Equipment and lines at manufacturing sites overseas can be constructed and operated in the same way as at sites in Japan without the need for training on wiring rules or detailed explanations.

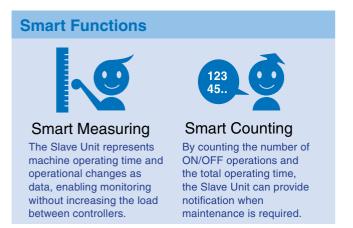

Support for Creating Maintenance and Safety Systems

Support is provided for creating maintenance systems that provide failure prediction as preventive maintenance to reduce equipment downtime, which is a constant issue at manufacturing sites. Page F-6 Using DeviceNet lets you create safety control networks and program logic. Monitoring with safety controls makes maintenance easier. Page F-8

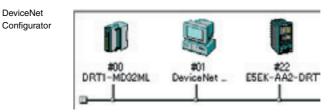

DRT2-series Smart Slaves are Intelligent for Your Networks from Installation

OMRON DRT2-series Smart Slaves decrease total costs and reduce work when used in a variety of manufacturing site applications, such as maintenance and quality control. The Slave Units monitor the network's power supply voltage and communications errors, which can be easily read using Support Software. In addition, the number of ON/OFF operations and total operating time of the devices wired to the slave are counted at the slave, which enables providing notification when maintenance is required.

Machine Operation Monitored by Slaves

Easy-to-view Display

Operating time, contact operation counter

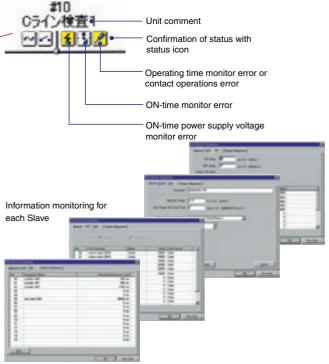

Improve Maintenance Efficiency

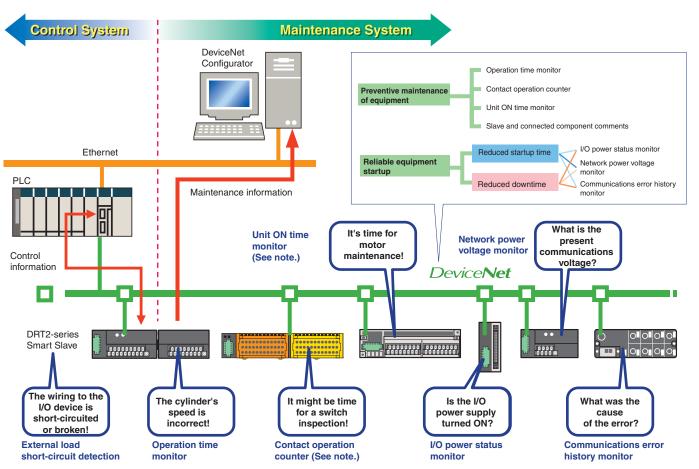

The Slave can hold comments, allowing quick identification of fault locations and faulty devices.

Complies with the Highest Safety Standards in th

The CIP Safety on DeviceNet System conforms to IEC 61508 SIL3 for functional safety, and EN 954-1 Safety Category 4 for machine safety, complying with the world's highest level of safety standards.

IEC 61508 SIL 3

Safety circuits must be able to function to provide safety at anytime. Conversely, the degree of lack of safety is used as the indicator. In IEC 61508, safety is defined as the Probability of Failure per Hour, or PFH. Based on this, the SIL (Safety Level) is classified into four levels. SIL 3 indicates a probability of dangerous failure of once in 1,000 years, which is the highest level in machine safety.

EN 954-1 Safety Category 4

EN standards evaluate the level of machine risk and require the incorporation of risk minimization measures. In EN 954-1, five safety categories have been established, with Safety Category 4 indicating designs that require the highest safety design level. This category is demanded for machines with the highest level of danger, wherein "serious injury (severed limbs, death, etc.) will occur frequently, with little chance of escaping danger." This category demands that a single fault (failure) in any part of the machine, or a series of faults, will not lead to loss of the machine's safety functions.

DeviceNet

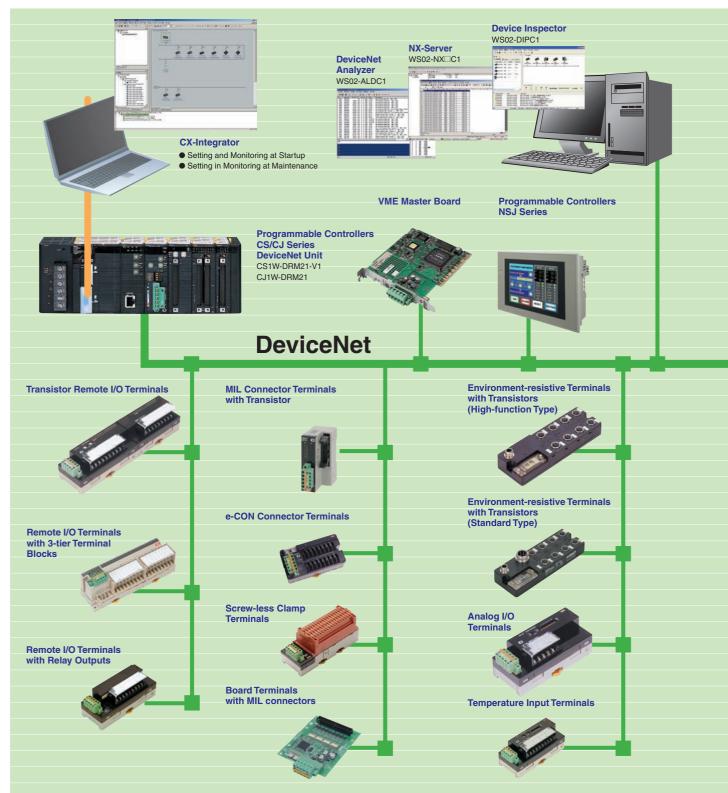

Through Our High Reliability and Application OMRON Provides a Wide Range of DeviceNet Selection for Your Worksite.

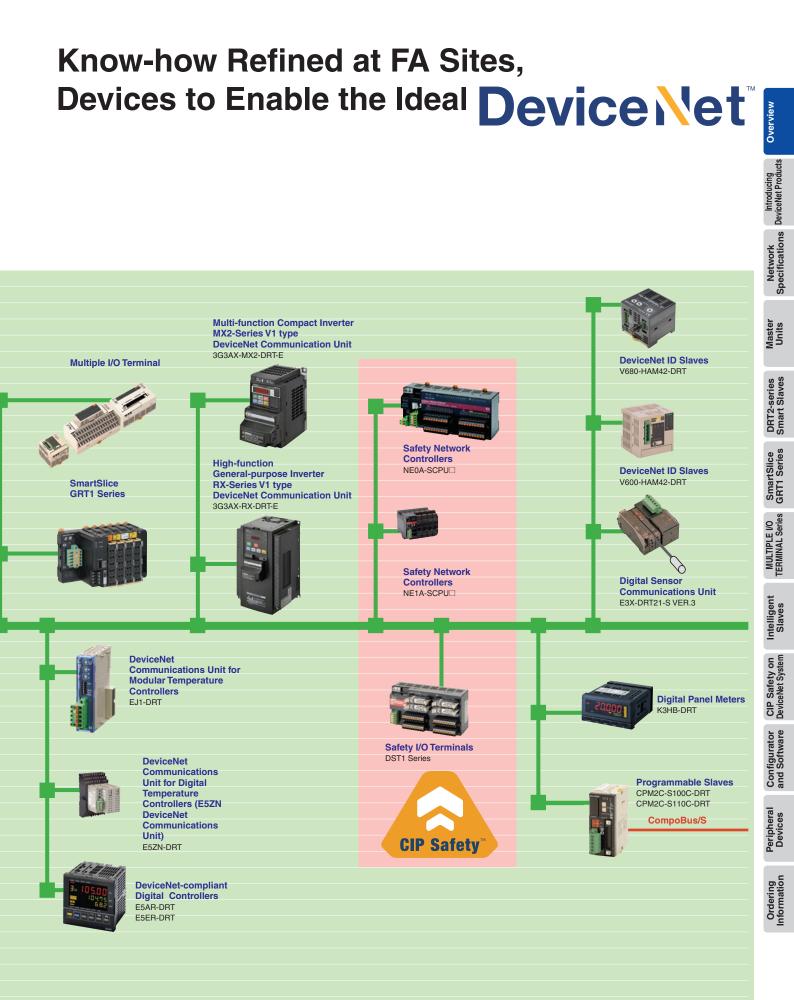

DeviceNet is a global open multi-vendor network that is spreading worldwide.

A wide variety of DeviceNet devices are provided by many vendors.

Having recognized the superior flexibility of DeviceNet for FA and its role as a global standard, OMRON provides a broad lineup of compatible devices.

In the future, OMRON will continue to enhance solutions using DeviceNet while further developing information technology and open networks.

CJ-series DeviceNet Unit 1W-DRM21

A DeviceNet Unit for the NJ/CJ Series

- Allows control of up to 32,000 points (2,000 words) per master, and ensures a high degree of simultaneity between data.
- Can be used as both a master and a slave at the same time.
- Equipped with settings and monitor functions aimed at improving both design and startup efficiency. Achieve maximum performance by using in combination with a Configurator.
- · Files of master and slave settings can be uploaded and downloaded using memory cards, allowing effective debugging and easier setup.

Refer to the DeviceNet Operation Manual (W267) for the communications power supply specifications. *1.

The Device Unit uses a node, and so connection is possible to 63 slaves only. *2.

*3. When the DeviceNet is used as a slave, "input" and "output" respectively refer to input from the slave to the master and output from the master to the slave.
 *4. The maximum message length includes the command code when using the CMND instruction. (SendCmd instruction with NJ-series controller)
 Note: When using with the Machine Automation Controller NJ Series, note the following points:

Simple backup function cannot be used.
DeviceNet configurator cannot be used. Use CX-Integrator.

General Specifications

The specifications conform to the CJ Series. Refer to the CJ Series Catalog (P052) for details on CJ-series specifications. CJ2 Series Catalog (P059) for details on CJ2-series specifications.

Programmable Controllers NSJ Series NSJ -T 1(B)-G5D

The NSJ-series Controller Completely Integrates a PT and Controller into One Package

- A PT, Controller CPU Unit, and DeviceNet Master Unit are completely integrated.
- Super space-saving design.
- Easily transfer screens and ladder programming using a commercially available USB cable.
- No cable connections or complicated communications settings required. Start operation simply by turning ON the power supply.
- Equipped with troubleshooter for the Controller and DeviceNet Master as a standard feature.

DeviceNet Board (PCI Board) 3G8F7-DRN21-E

PCI Bus DeviceNet Board

- Perform control using up to 25,200 bytes per master. Up to 400 bytes of I/O points per slave (Inputs: 200 bytes, Outputs: 200 bytes)
- Master and slave functions are included to enable simultaneous operation.
- DeviceNet Slave Data I/O

I/O can be performed with slaves simply by reading from and writing to the corresponding memory for each slave.

• The Board can be operated in combination with DeviceNet Configurator software and NX-Server Analyzer software.

Ordering Information

Smart Slaves DRT2 Series

In addition to the standard control functions, the DRT2-series Smart Slaves can collect a wide variety of manufacturing plant information and serve as key components in maintenance and quality control systems.

DRT2-series Smart Slave Features

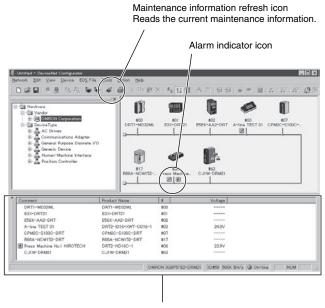

* The number of contact operations monitor function and the cumulative ON time monitor function cannot be used simultaneously for the same contact.

Configurator (Ver. 2.20 or Later) Maintenance Window

Various equipment information can be monitored from the following Configurator window (Ver. 2.20 or later) through DRT2-series Smart Slaves.

Maintenance Mode Window

Maintenance information window

Individual Slave's Maintenance Information Window

A DRT2-series Smart Slave's maintenance information window can be displayed by double-clicking the Slave's icon if an alarm indicator appears next to the Slave's icon.

| neral OUT IN Operation | ne Enry History | | E3 | |
|--|------------------------|-------|----|--|

* The operation time monitor can be used with the DRT2-D04CL(-1).

Notice: The contact operation counter function and the total ON time monitor function cannot be used simultaneously for the same contact.

Smart Slave Functions

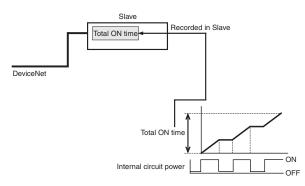

Network Power Voltage Monitor

The present, bottom, and peak values of the Network power voltage can be recorded in the Slave. Also, the monitor voltage can be set using the CX-Integrator to maintain the monitor voltage in the slave (default setting: 14 V), and a Status Area in the Unit will turn ON if the voltage falls below the monitor voltage.

• Unit Conduction Time Monitor

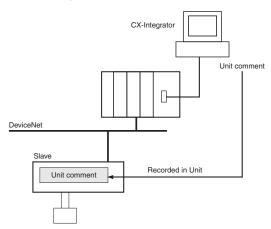

The total ON time of the Slave's internal circuit power can be calculated and recorded. (The CX-Integrator or explicit messages can be used to read the information.)

Also, the monitor value can be maintained in the Slave, and a Status Area will turn ON in the Unit when the total time reaches the set value.

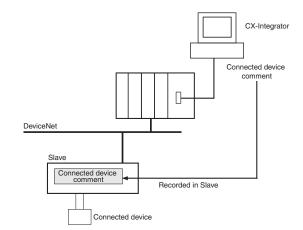

Unit Comment Function

The user can assign and record a name or comment for every Unit (up to 32 characters).

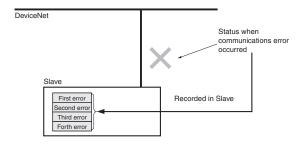

Connected Device Comment Function

The user can assign a name for each of the Unit's I/O contacts (up to 32 characters) and record it in the Unit. The connected device can be checked for each I/O contact, allowing faulty devices to be identified during remote maintenance.

Communication Error History Monitor

The error status information (communications error code and communications power voltage when the error occurred) for the last four communications errors that occurred can be recorded in the Slave.

Last Maintenance Date

This function enables writing to the Unit the date on which maintenance was last performed. This means that the timing for future maintenance can be judged more easily.

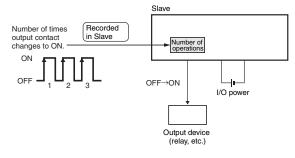

Contact Operation Count Monitor Function

The Contact Operation Counter is used to count the number of times each input or output contact changes from OFF to ON (maximum sampling cycle: 50 Hz) and record the total value calculated in the slave. (The CX-Integrator or explicit messages can be used to read the information.)

The monitor value can be set in the slave, and when the set number of operations is reached, a bit in the Status Area in the Unit will be turned ON. (The CX-Integrator or explicit messages can be used to read the details of the notification.)

- Counted operations: 0 to 4,294,967,295 operations
- (Stored data: 0000 0000 to FFFF FFFF hex)
 One operation
- Note 1: The Contact Operation Counter and Total ON Time Monitor cannot be used at the same time for the same contact. Select the function to be used under the Detection Mode heading.

Note 2: The Contact Operation Counter will operate only when the I/O power is ON.

• Total ON Time Monitor Function

The total ON time for each I/O contact can be calculated (unit: s) and recorded in the Slave. (The CX-Integrator or explicit messages can be used to read the information.)

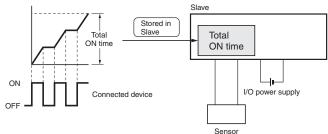

The monitor value can be set in the Slave, and when the set total time is reached, a bit in the Status Area in the Unit will be turned ON. (The CX-Integrator or explicit messages can be used to read the details of the notification.)

• Counted time: 0 to 4,294,967,295 seconds

(stored data: 0000 0000 to FFFF FFFF hex)

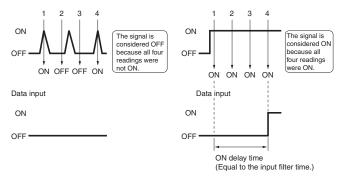

- · Counting unit: One second
- Note 1: The Contact Operation Counter and Total ON Time Monitor cannot be used at the same time for the same contact. Select the function to be used under the Detection Mode heading.
 - 2: The Total ON Time Monitor operates only when the I/O power is ON.
 - The Total ON Time Monitor checks approximately every second whether the connected devices are ON.
 If the total ON time is calculated for ON times of less than a second, the

If the total ON time is calculated for ON times of less than a second, the measurement may not be accurate.

Input Filter Function

This function can read the input value several times within a preset period and reduce the influence of incorrect signals due to switch chattering or data corrupted by noise. The input filter function can also be used for ON delay operation and OFF delay operation.

Function to Prevent Incorrect Inputs Caused by Inrush Current when Power Is Turned ON (input only)

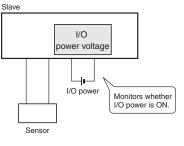

The I/O power supply can be monitored to stop any input when the I/O power is OFF and for 100 ms after it is turned ON. This function reduces incorrect inputs caused by inrush current for 100ms after the I/O power is turned ON.

I/O Power Status Monitor Function

This function is used to detect whether the I/O power is ON.

When the I/O power supply is turned OFF, a bit in the Status Area in the Unit is turned ON. (The CX-Integrator or explicit messages can be used to read the content of the notification.)

Note: The value for detecting a low voltage for the I/O power cannot be set.

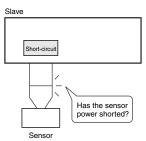

Sensor Power Short-circuit Detection Function (input only)

The sensor power supply current can be monitored, and when the current reaches or exceeds 100 mA per input contact, a sensor power short-circuit is detected.

Check whether a sensor power short-circuit has been detected using the indicators on the slave. When a sensor power short-circuit is detected, a bit in the Status Area in the Unit will turn ON. (The CX-Integrator or explicit messages can be used to read the details of the notification.) The sensor will automatically recover when the cause of the short-circuit is removed, and the power output to the connector where the short-circuit was detected will turn ON.

Note: Use a Power Supply Unit with a rated power supply of 50 W or higher for the communications power supply. A short-circuit is detected when the Unit's sensor power output current reaches or exceeds 100 mA per input connector. When a short-circuit occurs, the communications power supply may be temporarily interrupted. After a short-circuit has been detected, the power will be automatically restored, but during the power interruption use an external circuit in the configuration to make sure the system is operating safely. Use the following equations to calculate the sensor's current consumption.

- Total network current = Total Unit current consumption + Total sensor current consumption
- Communications power supply capacity \geq (Total network current + Short-circuit detection current) x (=100 mA) x (DeviceNet network voltage)

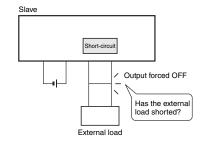

• External Load Short-circuit Detection Function (output only)

The load current of the Output Unit can be monitored, and an external load short-circuit can be detected when the current exceeds a set value per contact (or per common). When an external load short-circuit is detected, the output is turned OFF to prevent damage to the Unit's output circuit. The LED indicators on the Slave Unit can be used to check which contact has been detected as having an external load short-circuit. When an external load short-circuit is detected, a bit in the Status Area in the Unit will turn ON. (The CX-Integrator or explicit messages can be used to read the details of the notification.)

Manual recovery is the only way to remove the cause of the short-circuit.

Note: The OMRON S8 Power Supply Unit is recommended for the I/O power supply.

If a Power Supply Unit with a dropping overcurrent protection characteristic is used, the load short-circuit may not be detected. Always use a Power Supply Unit with a rating of 100 W or higher if it uses a dropping overcurrent protection characteristic.

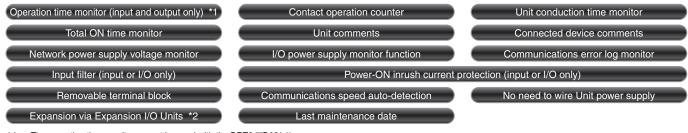

Transistor Remote I/O Terminals DRT2-D08(-1)/D16(-1)

Allows I/O Expansion with Transistor Terminals

- Wide variety of data, such as maintenance system data, can be collected without affecting the productivity of the control system.
- Valuable information can be collected and managed through the network, including information on the communications power supply voltage levels, Unit wear and tear, and equipment operating information.
- Expansion via Expansion I/O Units
- With no communications baud rate settings required and detachable terminal blocks, maintenance is easier.

Smart Slave Functions

*1. The operation time monitor cannot be used with the DRT2-□D08(-1).
 *2. Expansion Units cannot be added with the DRT2-□D08(-1)or DRT2-MD16(-1).

Wiring Diagrams

Expansion Units XWT-ID08(-1)/OD08(-1)/ID16(-1)/OD16(-1)

Expansion I/O Units make expansion easy!

One Expansion Unit can be added to each Digital I/O Slave Unit. This makes a variety of I/O combinations possible, such as 16 inputs + 8 outputs, extending the range of possible system configurations.

- Flexible expansion with many different combinations.
- Detachable I/O terminal block enables faster startup time and improved maintainability.
- Collect various preventive maintenance data required to improve productivity, as information on equipment deterioration due to aging and equipment operating time data.

Remote I/O Terminal with Relay Outputs DRT2-ROS16

A Smart Slave with Relay Outputs and One-step Relay Replacement for Remote Maintenance.

• Capable of handling large-capacity output devices (3 A max.)

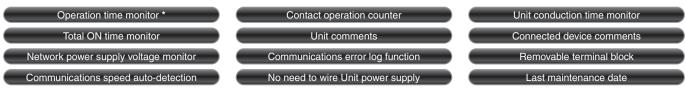

• Easy relay replacement.

 I/O expansion possible to transistor I/O devices with terminal blocks (XWT Series).

Smart Slave Functions

* Applicable only when an Expansion Unit (XWT Series) is used.

| Mounting method | 35-mm DIN rail mounting | |
| Screw tightening torque | M2 (communications connector screws): 0.2 to 0.3 N [•] m M3 (screw terminals): 0.5 N [•] m M3 (mounting screws): 0.5 N [•] m | |
| Weight | 260 g max. | |

Output Specifications per Relay

| Mounted relays | DRTA-NY5W-K * 1 |
|---|--|
| Rated load | Resistive load: 2 A at 250 VAC, 8 A per common 2 A at 30 VDC, 8 A per common |
| Rated current | 3A *2 |
| Max. contact voltage | 250 VAC, 125 VDC |
| Max. contact current | 3A |
| Max. switching capacity | 750 VA AC, 90 VDC |
| Min. applicable load (reference value) | 1 mA at 5 VDC |

***1.** Order replacement relays using the following model number.

Model DRTA-NY5W-K

The maximum number of ON contacts per common is four, and 3 A (10 A per common) will flow at an ambient temperature of 45° C max.

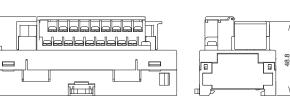

Expansion Units

One Expansion Unit can be added to each DRT2-ID16(-1)/-OD16(-1) or DRT2-ROS16 I/O Slave. The following Expansion Units are available to enable flexible expansion with combinations for the required number of points.

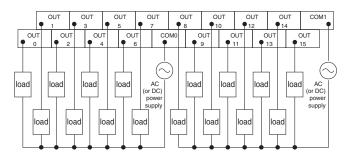

| Model | Number of I/O points | |
|------------|------------------------|--|
| XWT-ID08 | 8-point inputs (NPN) | |
| XWT-ID08-1 | 8-point inputs (PNP) | |
| XWT-OD08 | 8-point outputs (NPN) | |

Transistor Remote I/O Terminals with 3-tier Terminal Blocks DRT2-D16TA(-1)

A Smart Slave with a 3-tier Terminal Block That Means Wiring Locations Are Easy to Understand with No Sharing of Terminals.

- Easy wiring with no sharing of terminals. Easy-to-understand wiring locations.
- No relay terminal block terminals required.
- Detachable cassette-type circuit sections.

e-CON Connector Terminals DRT2-D16S(-1)

Includes Sensor Connector That Conforms to Industry Standards And Can Be Used to Connect Sensors with Pre-wired Cables without Using Special Tools.

- Equipped with the standard Smart Slave functions that provide powerful preventative maintenance and troubleshooting capabilities.
- Digital I/O Terminal compatible with industry-standard sensor connectors
- · Connect sensors easily without special tools. Reduce time required for wiring.
- Load short-circuit detection.

Board Terminals with MIL Connector DRT2-D32B(-1)/D32BV(-1)

First Board-type Terminals for Smart Slaves!

- Easily modified to handle an array of I/O interfaces and eliminates much on-site wiring.
- User boards attach easily to the DRT2-D32BV(-1) using screws.

Smart Slave Functions

Board Terminals with MIL Connector DRT2-D32B(-1)/D32BV(-1)

42

Screw-less Clamp Terminals with Transistors DRT2-D16SL(H)(-1)/D32SLH(-1)

Reduced Wiring and Labor on Factory Sites with Screw-less Terminal Wiring

- Screw-less structure eliminates tightening work.
- Detachable terminal blocks for easier maintenance.
- Single-step wiring by simply inserting pole terminals.

 Applicable wire sizes range from AWG24 to AWG16 (0.2 to 1.25 mm² dia.)

Environment-resistive Terminals with Transistors (High-function Type) DRT2-D08C(-1)/D16C(-1)

Environment-resistive (IP67) I/O Terminals with Troubleshooting Functions such as Sensor Power Supply Short-circuit Detection

- Equipped with the standard Smart Slave functions that provide powerful preventative maintenance and troubleshooting capabilities.
- High degree of environmental resistance with dust-proof and drip-proof construction.
- Power supply wiring is not required for input devices.
- Connect heavy-load devices (up to 1.5 A).
- Power supply wiring is not required for input devices such as sensors. (Power supply wiring is required for output devices.)
- Detects ground faults or disconnects and notifies the Master.

Smart Slave Functions

Environment-resistive Terminals with Transistors (Standard Type) DRT2-D04CL(-1)/D08CL(-1)/D16CL(-1)

Remote I/O Terminals with High Degree of Environmental Resistance (IP67) in Product Lineup Including Economical Input, Output, and Mixed I/O Models

- Common Smart Slave functionality provides strong support for equipment operation status monitoring and effective maintenance.
- High degree of environmental resistance with dust-proof and drip-proof construction. (IP67)
- Models with one connector for two outputs are available to make easier connection with hydraulic valve devices. (Models with 16 outputs and models with 16 mixed I/O)

Smart Slave Functions

* The operation time monitor can be used with the DRT2- \Box D04CL(-1).

Analog I/O Terminals DRT2-AD04(H)/DA02

Performs Calculations on Analog Values within the Slave Itself. Also Provides High Resolution at 1/30,000 (Full Scale) and Support for a Wide Variety of Data Sampling.

- Equipped with the standard Smart Slave functions that provide powerful preventative maintenance and troubleshooting capabilities.
- Sampling data can be analyzed internally to provide a low-cost scheduler function.
- Equipped with functions such as the scaling function, peak/bottom hold; top/valley hold; comparator function, cumulative counter, and derivative calculation function.
- Two I/O points can be allocated to any two of the following values: analog input, peak/bottom, top, valley, or rate-of-change. Values without an allocated I/O point can be read with message communications.

Note: With using a current input, always short the V+ and I+ terminals. (Use the shorting bar provided with the Unit.)

DRT2-DA02

Note: The voltage and current output ranges (signals) are set with either the DIP switch or the Configurator settings.

DRT2-AD04H

Note: With using a current input, always short the V+ and I+ terminals. (Use the shorting bar provided with the Unit.)

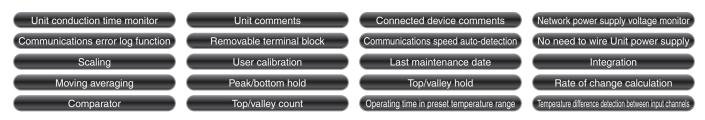

Temperature Input Terminals DRT2-TS04

Temperature Input Terminal with Smart Functionality

- The Temperature Input Terminal can be used with almost the same functionality as a Analog Input Terminal, such as with scaling and comparator functions.
- Enhanced performance is provided with functionality specific to the Temperature Input Terminal, such as the recording the operating time in a preset temperature range and temperature difference detection between input channels.

*1. A current of 0.35 mA flows to sensors connected to the DRT2-TS04P.
 *2. The indicator accuracy specifications differ depending on the mounting direction. Refer to the above table for details.

Indicator accuracy when only the Unit or the Terminal Block is replaced Indicator accuracy when only the Unit or the Terminal Block is replaced Indicator accuracy when only the Unit or the Terminal Block is replaced

In the DRT2-TS04T, a cold junction compensator is included in the Terminal Block. The indicator accuracy will be reduced depending on the mounting direction if only the Terminal Unit is replaced and the Lot No. and serial No. of the Terminal Block and Terminal Unit do not match. The Lot No. and serial No. of the Terminal Block and Terminal Unit can be found on the labels affixed to the products as shown below.

Terminal Unit Label

Remove the terminal block. The label is affixed to the top of the unit.

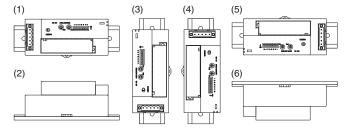

Terminal Block Label

The label is affixed to the left side of the terminal block.

If the Lot No. and serial No. of the terminal block and Unit are the same, basic performance specifications apply regardless of the mounting direction. If the numbers are different, the following indication accuracies apply.

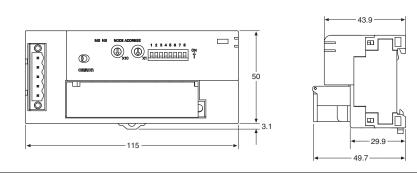

| Mounting direction | Indication accuracies | | |
|---|---|---|--|
| Mounted normally (1) | As specified in the Performance Specifications. | | |
| | (±0.3% of indication value ±1 digit max. | e or ±2°C, whichever is greater) | |
| | Input type | Indication accuracies | |
| | K1, K2, T, and N below -100°C | ±3°C ±1 digit max. | |
| Maximbad in any | U, L1, and L2 | ±3°C ±1 digit max. | |
| Mounted in any other direction other | R and S below 200°C | ±4°C ±1 digit max. | |
| than (1) | B below 400°C | Not specified. | |
| | w | ±0.3% of indication value or ±4°C (whichever is larger) ±1 digit max. | |
| | PLII | ±0.3% of indication value or ±3°C (whichever is larger) ±1 digit max. | |

SmartSlice GRT1 Series

DeviceNet-compliant Building-block I/O Terminals to Save Space, Cut Costs, and Reduce Work.

What Is the SmartSlice GRT1 Series?

This SmartSlice GRT1 Series consists of building-block I/O Terminals that enable building flexible systems to match the customer's applications with features such as I/O expansion using small numbers of points.

Set Only the Node Addresses

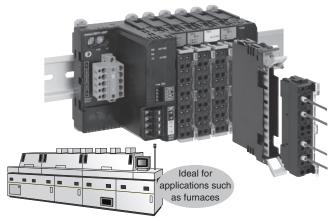

Automatic baud rate detection and automatic I/O allocations enable immediate use with no Support Software.

Online replacement makes maintenance easy

The terminal block, main block, and power supply block of the I/O Unit are detachable.

Replacement can be performed online without changing the I/O wiring and while maintaining communications for the remaining Units. This is ideal for applications such as furnaces, where heaters must be remain turned ON as much as possible.

Equipped with Smart Functions

The highly acclaimed Smart Functions of the DRT2 Series are used. This helps monitor the operation status of the equipment and improves capacity utilization.

Smart Timing

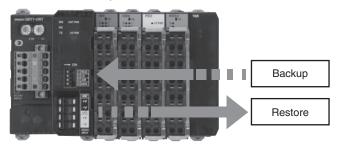

The Slave Unit stores the equipment operating time and amount of change in operation as data to enable monitoring without increasing the load between Controllers

Smart Counting

The number of ON/OFF operations of the equipment and the total operating time are counted by the Slave Unit to provide notification when maintenance is required.

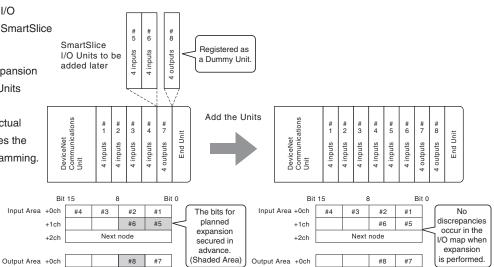

Recover Unit Parameters without Support Software

Unit data can be backed up by manipulating a DIP switch. Automatically restoring data after Unit replacement improves maintenance efficiency.

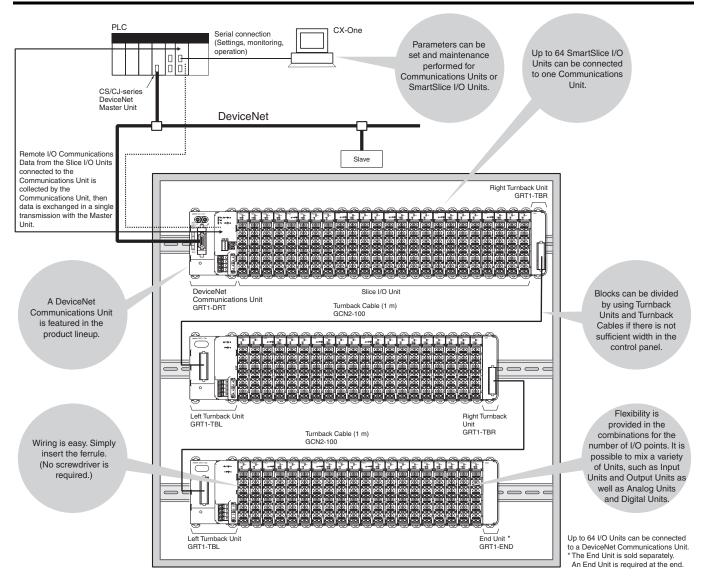

New Function I/O Allocation Software Settings

- This function enables registering the I/O configuration data of a non-mounted SmartSlice I/O Unit as a dummy.
- Securing the required capacity for expansion in the I/O map in advance when I/O Units must be added in the future prevents discrepancies in the I/O map when actual expansion is performed and eliminates the need for significant changes in programming.

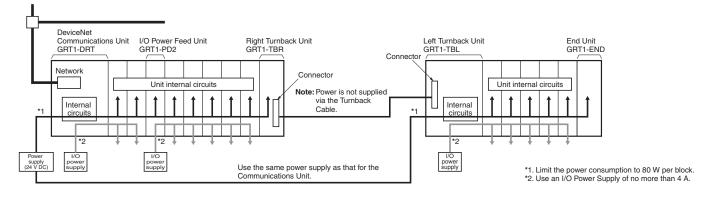

Support for flexible I/O configurations to match the application help downsize the control panel, cut costs, and decrease wiring work.

System Configuration

Internal Circuit Configuration

DeviceNet Communications Unit

DeviceNet-compliant Interface Unit with up to 1,024 I/O Points at One Node

- Connect up to 64 SmartSlice I/O Units.
- Consolidate a large capacity of I/O points into one Slave (up to 1,024 I/O points).
- Save space by configuring different I/O types using one Slave Unit.
- Easily get the system started simply by setting the node addresses.
- Replace SmartSlice I/O Units online while maintaining communications. This helps minimize equipment downtime.
- Smart functions for monitoring equipment operating status. This helps improve preventive maintenance and the utilization rate.
- Registering SmartSlice I/O for planned future expansion decreases design work when changes are made. (Supported for unit version 2.0 or higher.)

Ordering Information

| Name | Specifications | Model |
|-------------------------------|---|----------|
| DeviceNet Communications Unit | Up to 64 Slice I/O Units can be connected. (1,024 I/O points max.) | GRT1-DRT |

General Specifications

| Item M | GRT1-DRT | |
|-------------------------------|--|--|
| Network power supply voltage | 11 to 25 V DC (Supplied from the communications connector) | |
| Unit power supply voltage | 20.4 to 26.4 VDC (24 VDC -15%/+10%) | |
| I/O power supply voltage | 20.4 to 26.4 VDC * (24 V +10%/-15%) | |
| Noise immunity | Conforms to IEC 61000-4-4, 2 kV (power line) | |
| Vibration resistance | 10 to 60 Hz, 0.7-mm double amplitude 60 to 150 Hz: 50 m/s ² | |
| Shock resistance | 0 m/s ² | |
| Dielectric strength | 500 V AC between isolated circuits | |
| Insulation resistance | $20 \text{ M}\Omega$ min. between isolated circuits | |
| Ambient operating temperature | 10°C to 55°C (with no icing or condensation) | |
| Ambient operating humidity | 25% to 85% | |
| Ambient operating atmosphere | No corrosive gases | |
| Ambient storage temperature | -25°C to 65°C (with no icing or condensation) | |
| Mounting method | DIN 35 mm-track mounting | |

* For power supply input to the Slice I/O Units.

DeviceNet Communications Unit Specifications

| Item Model | GRT1-DRT | |
|---|--|--|
| I/O points | 1,024 max. (128 bytes), including inputs and outputs | |
| Connectable Slice I/O Units | 64 max. | |
| Communications with Slice I/O Units | 64 Units max. in a horizontal connection configuration (for an extension of approx. 2 m max.) Power consumption is limited to 80 W per block, and the extension must be done using Turnback Cables (two 1-m cables max., for a distance of 2 m max.) | |
| Slice I/O Unit data capacity | (1) 0, 2, or 4 bits (2) 0 to 16 words (in word increments) | |
| Status flags | e word is allocated (Communications Unit Status Flags) | |
| Parameter back-up and restore functions | 2 KB of data can be backed up and restored per Unit | |
| Message communications function | Supported | |
| Automatic baud rate detection | Supported | |
| Connector | 1 DeviceNet open connector with screws Connectable with multi-drop connector | |
| Terminals | 2 terminals for I/O power supply, 2 terminals for Unit power supply | |
| Power supply per 1 block | 80 W max. (Unit power supply) | |
| I/O power supply consumption current | 4 A max. | |
| Weight | 137 g | |

Nomenclature and Functions

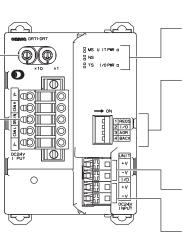

GRT1-DRT

Rotary Switches Used to set the node address for the DeviceNet Slave. (Set in decimal.) Node addresses from 0 to 63 can be set.

DeviceNet

Communications Connector Connects to the communications cable for a DeviceNet network.

70

Indicators

Indicate the condition of the DeviceNet Communications Unit and DeviceNet network, and the communications condition with the Slice I/O Units.

DIP Switch

Used to set the I/O allocation method, and to read and write configuration data from and to Slice I/O Units connected to the Communications Unit. SW1 (REGS): Create/Enable registered table SW2 (I/O): Enable/Disable I/O allocation mode ***** SW3 (ADR): Automatic restore SW4 (BACK): Backup trigger ***** Unit version 2.0 or later.

Unit Power Supply Terminals

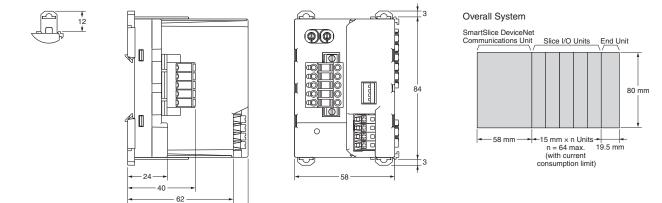

Supply power to the internal circuits of the Unit, and to the internal circuits of connected Slice I/O Units.

I/O Power Supply Terminals

Supply power to external inputs and outputs connected to the Slice I/O Units.

MULTIPLE I/O TERMINAL Series

A MULTIPLE I/O TERMINAL with a flexible combination of numerous versatile I/O Units handles digital I/O, analog I/O, counter inputs, or relay outputs and boosts on-site productivity higher than ever. Using a MULTIPLE I/O TERMINAL, one Slave (Communications Unit) can connect to a maximum of eight I/O Units to achieve control of a maximum of 1,024 I/O points. (see Note below.)

By using the DeviceNet Configurator (sold separately), control can be performed for up to 32,000 points for CJ1W-DRM21 and CS1W-DRM21-V1 DeviceNet Units, and 4,800 points for C200HX/HG/HE Master Units.
 Note: The number of I/O points under control may be restricted by the application. Refer to the DeviceNet MULTIPLE I/O TERMINAL Operation Manual (W348) for details.

Communications Unit

Connects to a Total Maximum of Eight Digital I/O, Analog I/O, and Relay Output Units Compatible with MULTIPLE I/O TERMINAL.

- Allows flexible combinations of I/O points.
- Covering a total cable length of 3 m.
- DIN track mounting.

Ordering Information

| Power supply voltage | Model |
|----------------------|----------|
| 24 VDC | DRT1-COM |

General Specifications

| Communications power supply voltage | 11 to 25 VDC (supplied from the communications connector) | | |
|--|---|--|--|
| Internal power supply voltage | 20.4 to 26.4 VDC | | |
| I/O power supply voltage | (24 VDC +10%/-15%) | | |
| Current consumption | Communications: 30 mA max. Internal circuit: 0.6 A at 24 VDC (with max. I/O load) | | |
| Dielectric strength | 500 VAC | | |
| Noise immunity | Conforms to IEC61000-4-4, 2 kV (Power line) | | |
| Vibration resistance | 10 to 150 Hz, 1.0-mm double amplitude or 70 m/s 2 | | |
| Shock resistance | 200 m/s ² | | |
| Mounting strength | No damage when 100 N pull load was applied in all directions (10 N min. in the DIN track direction) | | |
| Terminal strength | No damage when 100 N pull load was applied | | |
| Screw tightening torque | 0.3 to 0.5 N·m Phoenix connector: 0.25 to 0.3 N·m | | |
| Ambient operating temperature | -10°C to 55°C (with no icing or condensation) | | |
| Ambient operating humidity | 25% to 85% | | |
| Ambient storage temperature | -25°C to 65°C (with no icing or condensation) | | |
| Accessories | End connector (one) | | |

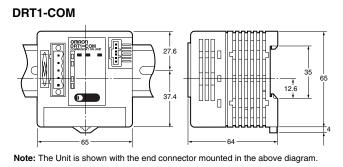

Specifications

| Connectable Units | | 8 |
|--------------------------------|------------------|--|
| Unit I/O points | | 1,024 max. (including inputs and outputs) |
| Communications Total extension | | 3 m max. |
| distance | Between Units | 1 m max. (40 mm max. with the standard cable provided with the Unit) * |
| Dielectric strength | | 500 VAC for 1 min. |
| Mounting method | | DIN 35 mm-track mounting |
| Unit output power supply | | 0.4 A max. (see Note.) |

* One cable is provided with each I/O Unit.

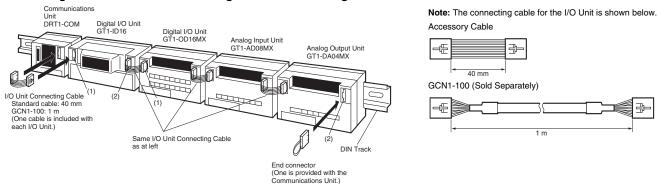

Note: The total current consumption for I/O Unit interfaces must not exceed 0.4 A.

Intelligent Slaves (PLC Units)

Programmable Slaves CPN2C-S1 OC-DRT

Slaves with the Complex Functionality Needed for Distributed Blocks

Programmable Slaves combine devices, such as sensors and actuators, into one functional unit that is treated as a DeviceNet slave.

Programmable Slaves greatly facilitate device distribution and functional organization. They help standardize programming between units and reduce the amount of programming required at the master.

I/O and operational checks can be performed for each functional unit, rather than waiting for final system assembly, as with conventional distributed I/O systems.

- A Programmable Slave can be programmed from a CX-Programmer up to 3 network levels away. (Includes the DeviceNet network itself. Possible only with CX-Programmer Ver. 2.1 or later and a Programmable Slave Ver. 1.04 or later.)
- DeviceNet Slave Functions

Multiword I/O links and explicit messages are used to control slaves from the master. Log data for communications can be sent in one operation whenever necessary using explicit messages.

CompoBus/S Master Functions

Less wiring is required for terminal block expansions, connections to remote devices (such as signal lights or pushbutton switches), and connections to pneumatic valves and other non-OMRON products. Connect using VCTF cable or Special Flat Cable, which allows easy branching.

• RS-232C Communications

Connected to bar code readers, Programmable Terminals, and other devices, the Programmable Slave processes data locally to reduce the load on the master.

• Expansion Units (3 max.)

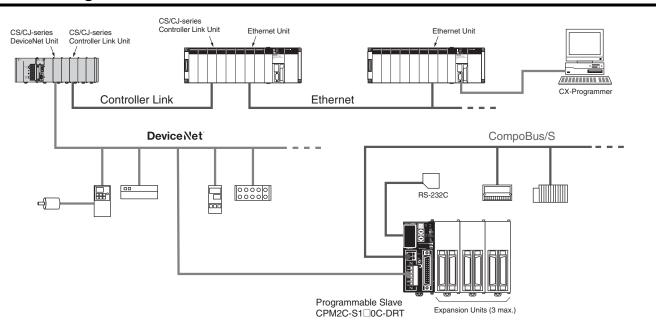

Just one Unit is required for each distributed block, reducing the number of interfaces for multipoint communications to, in turn, reduce costs.

Ordering Information

| Unit type | | Input | Output | Clock | Model | | |
|--------------------------------------|-----------|------------------|---------------------------------|-------|-----------------|--|--|
| 10 I/O points 6 inputs; 4 outputs | Connector | 6 points: 24 VDC | 4 points: transistor (sinking) | Yes | CPM2C-S100C-DRT | | |
| | | | 4 points: transistor (sourcing) | Yes | CPM2C-S110C-DRT | | |

Note 1: For details on CPM2C PLCs, refer to the CPM2A/CPM2C Catalog (P049). Note 2: For details on Programmable Slave specifications, refer to the Programmable Slave Catalog (R071).

Digital Sensor Communications Unit E3X-DRT21-S VER.3

The DeviceNet Communication Unit That Simplifies Managing Sensor Settings

- ON/OFF signals and incident light levels can be sent to the host PLC without any need for programming (DeviceNet communications slave functionality).
- Threshold values and function settings can be read, written, or taught (using the Message Communications function).
- Simply connect the communication cables and slide the Amplifiers from the side for wire-saving.
- Up to 16 Sensor Amplifiers can be connected.

| Ambient operating temperature | | -20°C to 55°C | | |
| Ambient operating humidity | | 35% to 85% (with no condensation) | | |
| Ambient storage temperature | | -30°C to 70°C | | |
| Dimensions (mm) | | 30 x 34.6 x71.3 (W x H x D) | | |
| Weight (packed state) | | Approx. 150 g | | |

Note 1: When any of the following Sensors is connected, two words are allocated per Sensor and each Sensor is counted as two Sensors for the number of connected Sensors. E3X-DA_S (:: 7/9), E3X-DA_TW-S (:: 6/8), E3X-MDA_ (:: 6/8), E3C-LDA_ (:: 6/8), E2C-EDA_ (:: 6/8), E3X-DA_S (:: 7/9), E3X-DA_TW-S (:: 6/8) have been discontinued at the end of March 2017.
2: Communications is possible for the ON/OFF output data from 13 Units. One word is allocated as the input area in the Master.
3: Communications is possible for the ON/OFF output data from 16 Units and the number of connected Sensors. Two words are allocated as the output area in the Master.
4: Communications is possible for the ON/OFF output data from 16 Units, the number of connected Sensors, and the detection levels for the connected Sensors. Two words are allocated as the output area in the Master.

Two words are allocated as the input area and one word is allocated for the number of connected Sensors in the Master.

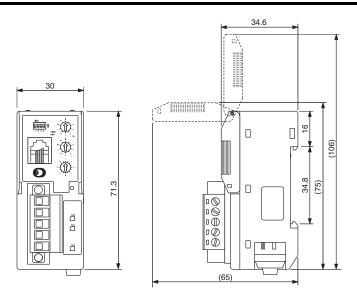

5: Connection cannot be performed if the response speed of the Sensor is set to super-high-speed mode.

6: This does not include the current supplied to the Sensor.

Dimensions

(Unit: mm) Tolerance class IT16 applies to dimensions in this data sheet unless otherwise specified.

E3X-DRT21-S VER.3

DeviceNet ID Slave

Electromagnetic-coupling ID System Conforms to DeviceNet and Saves Wiring Effort

- The world's first Intelligent Flag III with support for DeviceNet.
- Responds flexibly to applications with data reading up to 24 bits.
- Switch writing between units of 8 bits and 16 bits.
- Address to access can be set from master.

Operation indicator

DeviceNet-compliant Digital Indicators

Digital Indicators Ideal for Measurement Displays and Judgment of Analog Levels, Such as Voltage Signals, Current Signals, and Temperatures

- High-precision, high-speed sampling.
- Measurement resolution of 0.01°C and sampling of 50 times per second.
- High-visibility negative-transmissive LCD with bright backlight.
- Present values and deviations are displayed using a bar graph.
- Compliant with CE and UL standards as well as RoHS.

DC power supply models require a control power supply capacity of approximately 1 A per Unit when power is turned ON. Particular attention is required when using two or more DC power supply models. The OMRON S8VS-series DC Power Supply Unit is recommended. PNP input types are also available. For K3HB-series DeviceNet models, use only the DeviceNet Connector included with the product. The crimp terminals provided are for Thin Cables. Depends on the model. *1.

DeviceNet-compliant Digital Controllers E5AR-DRT/E5ER-DRT

General-purpose Digital Controllers with High Speed and High Accuracy. Three, 5-digit Easy-to-read Tall LCD Displays.

- High-speed sampling cycle (50 ms) for applications requiring high-speed response.
- Three backlit, negative LCD displays for simultaneous display of PV, SV, and MV.
- Multipoint control, cascade control, and proportional control all possible with a single Controller.
- Data processing functions provided as standard features: Square root extraction, linear approximation, and more.
- DeviceNet communications for data setting and monitoring without special programming.

Digital Controllers E5AR

DeviceNet Communications Unit for Modular Temperature Controller

EJ1-DR

Easily Perform Temperature Control for Multiple Channels.

- Up to 16 Temperature Controllers can be connected to a single DeviceNet Communications Unit.
- Sharing target values and present values using remote I/O communications without special programming reduces development work for communications.
- Flexibly allocate I/O memory using either fixed allocation addresses for simple allocations or user-set allocations from the Configurator.
- The EJ1 parameters can be backed up for easy resetting of parameters when the EJ1 is replaced.
- Explicit messages be sent from the PLC to easily read or write any parameter.

Dimensions

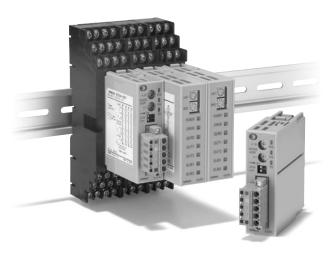

DeviceNet Communications Unit for Digital Temperature Controllers

E5ZN-DRT

Connect the E5ZN Modular Temperature Controllers through DeviceNet.

- The I/O link function can be used to make settings and monitor values (such as process values) in the E5ZN Modular Temperature Controller without communications programming.
- Up to 16 E5ZN Modular Temperature Controllers can be connected to one Unit.
- The DeviceNet Configurator can be used to upload or download all of the E5ZN Modular Temperature Controller's parameters in one batch.

Ordering Information

DeviceNet Communications Unit

*1. Terminal Units are required for wiring. Purchase separately.

*2. When connecting the controlled system's load, the heating or cooling control output can be allocated to the control output or auxiliary output. When connecting a recording device or Digital Panel Meter, the transfer output can be allocated to the analog output model's control output or auxiliary outputs 3 and 4.
 *3. When using the heater burnout alarm, purchase a Current Transformer (E54-CT1 or E54-CT3) separately.

When using heating/cooling control, the auxiliary output will be either the heating control output or the cooling control output.

***5.** Analog inputs and infrared temperature sensors (ES1A Series) can also be used with thermocouple models.

Terminal Unit

| Unit Name | No. of terminals | Functions | Model |
|---------------|------------------|--|-------------|
| Terminal Unit | 24 | Equipped with communications terminals for power supply, communications, and setting devices. | E5ZN-SCT24S |
| Terminar Onit | 18 * | Not equipped with communications terminals for power supply, communications, and setting devices. | E5ZN-SCT18S |

Note: Two End Plates are provided with E5ZN-SCT24S Terminal Units. When mounting to a DIN track, be sure to mount End Plates on both sides

* When 2 or more E5ZNs are being mounted side-by-side, use this Terminal Unit for the second or higher Units. Up to 16 Terminal Units (32 channels) can be used. When using E5ZNs individually, be sure to use the E5ZN-SCT24S.

Specifications

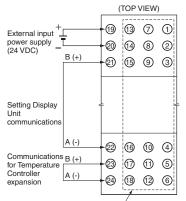

| Power supply voltage | DeviceNet communications power supply voltage 11 to 25 VDC |
|---|---|
| Connectable Temperature Controllers | E5ZN Series |

Multi-function Compact Inverter MX2-Series V1 type DeviceNet Communication Unit

G3AX-MX2-DRT

Support for open network with **DeviceNet Communications Unit**

- Reduced wiring of Multi-function compact inverter MX2 series *1
- 8 types of remote I/O functions
- The Explicit Message functions in addition to remote I/O functions
- Parameter edit via DeviceNet by using support tool CX-Drive *2

*1 DeviceNet communication unit can be used with the inverter 3G3MX2 of unit version 1.1 or higher. *2 CX-Drive can be used with version 2.6 or higher.

High-function General-purpose Inverters RX-Series V1 type DeviceNet Communication Unit

3G3AX-RX-DRT-E

Support for open network with DeviceNet Communications Unit

- Reduced wiring of Multi-function compact inverter RX series *1
- 8 types of remote I/O functions
- The Explicit Message functions in addition to remote I/O functions
- Parameter edit via DeviceNet by using support tool CX-Drive *2

*1 DeviceNet communication unit can be used with the inverter 3G3MX2 of unit version 1.1 or higher. *2 CX-Drive can be used with version 2.6 or higher.

Safety Network Controller NE0A-SCPU01

New Lineup for Safety **Applications with Up to 12 Inputs**

- The safety circuits you create can be registered as templates and reused, for easy standardization.
- TÜV-certified templates is also available.
- The NE0A operating conditions can be monitored from a standard DeviceNet Master.
- Network distribution is possible by combining with an NE1A Safety Controller.

Functions

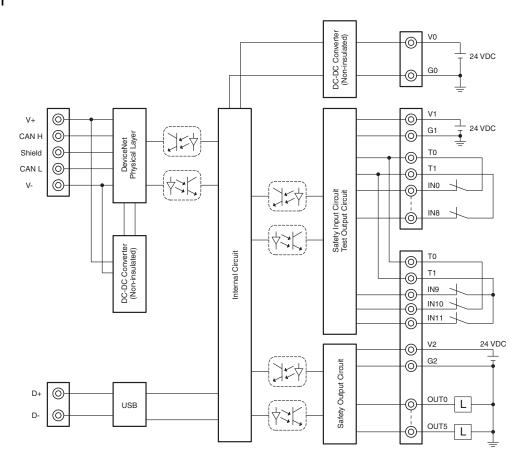

The following function blocks are available for designing safety circuits with the NE0A-SCPU01. These function blocks can be selected and assembled using the interactive wizard format to efficiently design safety applications.

| Classification of function block for safety circuit designs | Application | | | | |
|--|--|-------------------------------|--|--|--|
| | The following six parts can be selected for use as safety input devices. For Category 3 or 4 compliance, the filter monitoring time between signals can also be adjusted with redundant wiring for the necessary safety devices. | | | | |
| | Emergency Stop Switches | | | | |
| Function blocks for safety input devices and setting input filter | S | Safety Door Switches | | | |
| times | L | Limit Switches | | | |
| | S | afety Light Curtains | | | |
| | E | nabling Switches | | | |
| | Ν | lode Selectors | | | |
| | Select a Safety Light Curtain as the safety input device, and select a muting function when required. | | | | |
| Logic function blocks for input | Ν | lo setting | Uses the ON/OFF status from the safety input device exactly as it is. | | |
| | C | R operation | | | |
| conditions | Α | ND/OR operations | For switching maintenance areas with a Mode Selector. | | |
| | A | ND operation | For applications such as a Safety Light Curtain muting function. | | |
| | C | R/AND operations | | | |
| Function blocks for resets | Selects ma | Selects manual or auto reset. | | | |
| | For applications such as stopping all outputs for multiple safety devices. | | | | |
| Logic function blocks for output | Ν | lo setting | Uses the ON/OFF status of the safety signal exactly as it is. | | |
| conditions | Α | ND operation | Calasta the interledy conditions for the safety signal | | |
| | C | R/AND operations | Selects the interlock conditions for the safety signal. | | |
| | Used to ch | eck the safety condition of | an output device. | | |
| Function blocks for setting the | Ν | lo setting | No checking of the output device (used for Category 2 or lower). | | |
| welded contact check | E | DM | Used to check for contact welding in a Relay or Contactor. Also used to change the setting for monitoring time. | | |
| Function blocks for safety output devices and setting output delay times | For setting | an auxiliary output (to outp | ut an error condition) and for setting the output delay. | | |

Note: There is a possibility that safety cannot be maintained when an OR part or an AND/OR part is selected for input logic, or an OR/AND part is selected for output logic. Sufficiently confirm safety prior to use.

Internal Circuit Diagrams

NE0A-SCPU01

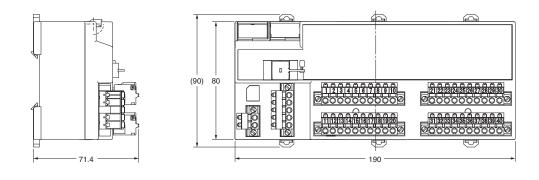

| Terminal No. | Terminal name | Description | |

Safety Precautions

• Be sure to read the following operation manual for precautions and other details required for correct use of the Safety Network Controller. CIP Safety on DeviceNet Safety Network Controller NE0A Series Operation Manual (Cat. No. Z916)

Safety Network Controller **NE1A-SCPU Series**

Achieve Safety Control through Programming.

 The NE1A-SCPU01-V1 provides 16 built-in safety inputs and 8 builtin safety outputs.

The NE1A-SCPU02 provides 40 built-in safety inputs and 8 built-in safety outputs.

- Reduced wiring with safety networks. Connect up to 32 Safety Terminals.
- Monitor the safety system from Standard Controllers across the network.
- ISO13849-1 (PLe) and IEC 61508 SIL3 certification.

Ordering Information

| Name | I/O points | | | Model | Unit version |
|----------------------------|---------------|--------------|----------------|----------------|--------------|
| Name | Safety inputs | Test outputs | Safety outputs | Model | Unit version |
| Safety Network Controllers | 16 | 4 | 8 | NE1A-SCPU01-V1 | Ver. 2.0 |
| Salety Network Controllers | 40 | 8 | 8 | NE1A-SCPU02 | Ver. 2.0 |

Note: The standard NE1A Controllers are equipped with spring-cage terminal blocks, but other screw terminal blocks are available if desired, e.g., to replace previous terminals. Refer to Accessories.

• Unit Versions and Network Configurator Versions

Network Configurator version 2.0 or higher must be used when using a NE1A-SCPU01-V1 or NE1A-SCPU02 Safety Logic Controller with unit version 2.0.

| | | | | | O : Suppo | rted,: Not supporte |
|------------------------------------|----------------------|----------|----------|----------------|-----------|---------------------|
| Model | Network Configurator | | | | | |
| Model | Ver. 1.3 | Ver. 1.5 | Ver. 1.6 | Ver. 2.00/2.10 | Ver.2.2 | Ver.3.3 |
| NE1A-SCPU01 Pre-Ver. 1.0 | 0 | 0 | О | 0 | 0 | 0 |
| NE1A-SCPU01-V1 Unit version 1.0 | × | × | О | 0 | О | 0 |
| NE1A-SCPU02 Unit version 1.0 | × | × | О | 0 | О | О |
| NE1A-SCPU01-V1 Unit version 2.0 | × | × | O (*1) | 0 | О | 0 |
| NE1A-SCPU02 Unit version 2.0 | × | × | O (*1) | 0 | О | 0 |

It can be used as unit version 1.0.

Note 1: Users who use Network Configurator version 1.5 or earlier can upgrade to version 1.6 at no charge. Note 2: When using Network Configurator version 1.6 , there are no operational differences in the NE1A-SCPU01-V1 and NE1A-SCPU02.

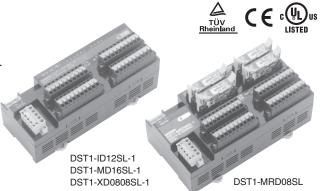

Version Upgrade

If you have purchased Ver.1. , you will need to buy the upgrade CD-ROM. (Refer to page 127.)

Safety I/O Terminals **DST1 Series**

Distributed Safety Terminals That Reduce Wiring.

- Four models are available to match the I/O type and number of points.
- Monitor operation from the DeviceNet Master using the DeviceNet Slave functionality.
- Support for logic processing by the DST1-XD0808SL-1.
- IEC 61508 SIL3 and EN 954-1/ISO13849-1 CAT4 certification.

Ordering Information

| Name | I/O points | Model |
|----------------------|--|-------------------|
| | Safety inputs: 12, test outputs: 4 | DST1-ID12SL-1 |
| Safety I/O Terminals | Safety inputs: 8, safety outputs (semiconductor): 8, test outputs: 4 | DST1-MD16SL-1 |

| Main unit | Personal computer with processor recommended by Microsoft |
| Memory | Memory capacity recommended by Microsoft |
| Hard disk drive | At least 200 MB of hard disk space |
| Monitor | SVGA (800 x 600 resolution) or higher with 256 colors minimum |
| Disk device | CD-ROM drive |
| Mouse | Windows-supported mouse or other pointing devices |
| Communications port (Note) | One of the following communications port is required: • USB port: When using a USB port (USB 1.1) of NE1A-SCPU series or NE0A series to connect online • Ethernet port: When using Ethernet to connect online • DeviceNet interface card (3G8F7-DRM21 or 3G8E2-DRM21-V1): When using DeviceNet to connect online |

Note 1: PC cannot be put into a standby state with the NE1A series connected via USB cable.2: DeviceNet interface card does not conform to 64-bit operating system.

3: One or more USB port is required on a communications port of the maintenance tool.

4: Windows is a registered trademark of Microsoft.

Safety Precautions

• Be sure to read the following operation manual for precautions and other details required for correct use of the Safety Network Controller.

CIP Safety on DeviceNet Safety Network Configurator Operation Manual (Cat. No. Z905)

Unit Versions and Network Configurator Versions

Network Configurator version 2.0 or higher must be used when using a NE1A-SCPU01-V1 or NE1A-SCPU02 Safety Logic Controller with unit version 2.0. The following table shows the relationship between unit versions and Network Configurator versions.

O : Applicable, X: Not applicable

| Model | Network Configurator | | | | | |
|------------------------------------|----------------------|----------|----------|----------------|---------|---------|
| Model | Ver. 1.3 | Ver. 1.5 | Ver. 1.6 | Ver. 2.00/2.10 | Ver.2.2 | Ver.3.3 |
| NE1A-SCPU01 Pre-Ver. 1.0 | 0 | 0 | 0 | 0 | 0 | 0 |
| NE1A-SCPU01-V1 Unit version 1.0 | × | × | О | О | О | О |
| NE1A-SCPU02 Unit version 1.0 | × | × | О | 0 | 0 | 0 |
| NE1A-SCPU01-V1 Unit version 2.0 | × | × | O (*1) | О | О | О |
| NE1A-SCPU02 Unit version 2.0 | × | × | O (*1) | О | О | О |

*1. It can be used as unit version 1.0.
Note 1: Users who use Network Configurator version 1.5 or earlier can upgrade to version 1.6 at no charge.
2: When using Network Configurator version 1.6, there are no operational differences in the NE1A-SCPU01-V1 and NE1A-SCPU02 Safety Logic Controllers that derive from the unit version.

DeviceNet Configurator Software Version 2.□ WS02-CFDC1 DeviceNet Configurator PC Card (Software Included) 3G8E2-DRM21-V1

Easily Build and Maintain Multi-vendor DeviceNet Networks.

- Easily build networks using graphical screen operations.
- Make connections from a DeviceNet Card for personal computers or from a serial port.
- Monitor devices while connected online.
- Build maintenance systems with Smart Slaves.

Building and Setting Networks

Easy to Build Networks Using Graphical Screen Operations

You can build a network and make device settings on a computer by dragging and dropping devices selected from the hardware list for virtual networks (equivalent to network configuration files) in the Configurator. Also, configurations can be downloaded to devices online and saved in files.

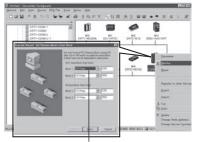

Setting Device Parameters

You can configure a network and edit device parameters by dragging and dropping device files in the virtual network in the Configurator when it is offline. This improves design efficiency.

• Creating a Scan List with the Wizard (Conversational Settings) You can use the wizard to easily allocate I/O and register Slaves to the Master to create a scan list.

And, you can easily check allocations to registered Slaves.

Scan List Wizard

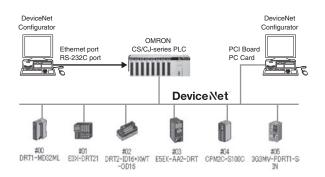

Online Connections

Connection from a DeviceNet Board for PC or Serial Port

Connections can be made online using a DeviceNet Board, DeviceNet Card, or OMRON CS/CJ-series PLC from the computer.

- You can directly connect to DeviceNet devices by using an OMRON PCI Board or PC Card through a DeviceNet Board or DeviceNet Card. (Nodes are allocated to the Board/Card.)
- Computer RS-232C COM Port Connection
- Connections can be made using a peripheral port or a serial port on a Serial Communications Board/Unit of an OMRON CS/CJ-series PLC that has a DeviceNet Unit connected to the COM port on a computer. Computer Ethernet Port Connection

Connections can be made using an Ethernet Unit of an OMBON CS/CJ-series PLC that has a DeviceNet Unit connected to the Ethernet port on a computer.

Device Management and Monitoring

Monitor Devices While Connected Online

- Support for Network Downloading and Monitoring for Devices* The following items can be monitored using an OMRON CS/CJ-series PI C
- Overall communications status of network
- · Status of Masters and Slaves
- Unit status
- · Communications cycle time
- Error history
- * This applies only to devices with the monitor function.

Building Maintenance Systems

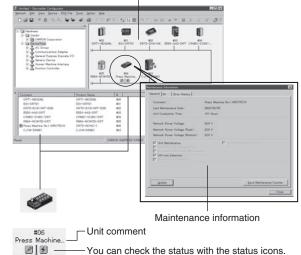

Maintenance Systems Built with Smart Slaves

Smart Slave Maintenance Information

Maintenance information stored in Smart Slaves can be read and use to build a maintenance system that functions separately from the control system.

Maintenance Mode Window

You can check the status with the status icons.

Configurator List

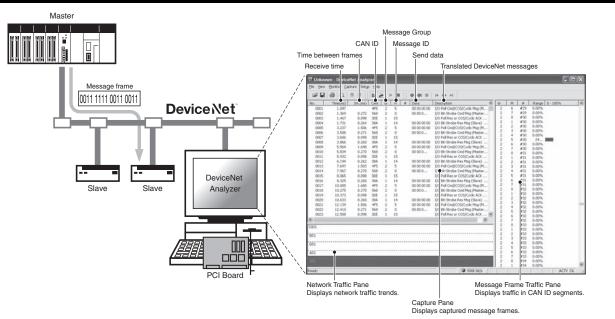

- Software only: WS02-CFDC1-E
- PC Card with software included: 3G8E2-DRM21-V1
 - (Applicable OS: Windows 2000 (ServicePack2 or higher)/XP)

DeviceNet Analyzer WS02-ALDC1

Perform Diagnosis and Analysis for Networks by Directly Connecting to an OMRON DeviceNet PCI Board. Helps Improve Efficiency of Device Development and System Startup.

- Capture messages frames flowing on DeviceNet.
- Translate and display the captured message frames to easily perform diagnosis and analysis.
- Functionality is provided in the capture filter to display only messages that match the specified conditions.
- Set the trigger conditions for starting and stopping capture.
- Combine multiple conditions (e.g., AND, OR, THEN) for the trigger conditions.
- Display the traffic (load percentage) in a trend graph for each time interval (100 ms) to determine changes in the communications cycle time and to help determine system distribution.
- Display the percentage of a specified message frame relative to all message frames.

System Configuration

Ordering Information

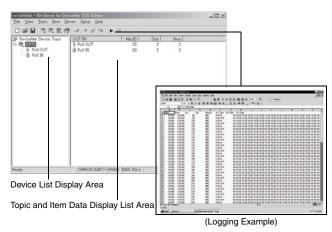

| Name | Applicable OS | Description | Model |

NX-Server

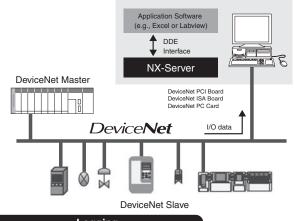

Easily Perform Monitoring and Logging for Various Types of I/O Data on DeviceNet.

- Monitor I/O data flowing on DeviceNet.
- Log data of specified devices using advanced triggering.
- The NX-Server is equipped with a unique frame analysis engine, and so a node is not allocated to it.
- · Collect data without increasing network traffic.
- The product lineup includes a development kit for developing a DDE server and applications as well as software for operating existing user applications.

Ordering Information

| | Name | Applicable OS | Description | Model |
|-----------|---------------------------|---|--|--------------|
| | For DeviceNet DDE Edition | | This software manitors and loss 1/O data as | |
| NX-Server | For DeviceNet SDK Edition | Windows 2000 (Service Pack2 or higher)/XP | This software monitors and logs I/O data on DeviceNet lines. | WS02-NXDC1-E |
| | For DeviceNet RT Edition | | | |

Logging

Logging can be performed by directly obtaining from the line the commands communicated between the specified Slaves and

Master.

The logging data can be saved in an CSV-format file and analyzed in Excel.

- Set triggers to start logging or other processes simply by selecting device topics.
- You can set whether to perform logging for each device and also set the trigger conditions.

Monitor

Using the NX-Server, you can display in realtime the data of nodes specified in application software on a DDE interface, such as Excel.

- Display the data of all Slaves participating in a DeviceNet network.
- One optional function provided by the NX-Server lets you open a specific file (in this case, a set Excel file) at the same time that the NX-Server starts.
- Also, the NX-Server can be incorporated into monitoring software, such as Labview, in addition Excel.

NetXServer Functions

- Topic names and item names for data can be flexibly set for individual devices to monitor or log.
- Server name of DDE interface for user-disclosed interface: NETXDNET.
- The size and format (bit, byte, or word) of data can be specified.
 Whether to log data for each device and setting the trigger conditions can be
- performed for each device.
- Logging data can be checked in standard CSV format.
 The NX-Server is equipped with a unique frame analysis engine, and so a MAC
- The two-server is equipped with a unique traine analysis engine, and so a two ID is not allocated.
 Data can be collected without increasing network traffic.

Product Introduction

- The NX-Server for DeviceNet DDE Edition is a dynamic data exchange (DDE) server that provides software to collect I/O data and perform host monitoring of the collected I/O data.
- •The NX-Server for DeviceNet SDK Edition is a development kit for developing applications that use core modules of NetXServer for DeviceNet.
- The NX-Server for DeviceNet RT Edition is platform software to operate user applications developed using the SDK Edition.
- The 3G8F7-DRM21 PCI Board or 3G8E2-DRM21-V1 PC Card can be used for the hardware.

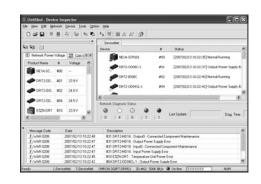

| System Requirements for NX-Server for DeviceNet DDE Edition | | | | |

Device Inspector WS02-DIPC1

Software for Monitoring the Status of Devices on DeviceNet and Detecting Errors.

- Easily access the status of devices and present error details.
- View all CAN errors held by devices.
- Monitor device participation and withdrawal.
- Display error detection data with a time stamp and save the data to a file.
- Use a graph display of the network power supply voltage to monitor changes.

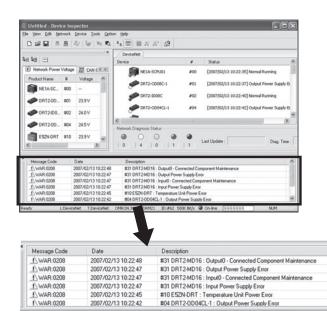

Ordering Information

• Peripheral Devices for Flat Cables

| Product | Appearance | Model | Specifications |
|--|------------|--|---|
| Connector for Flat Cable | | DCN4-SF4D | Connector with lock screws for crimping flat cable |
| Conversion Connector for Standard Thin Cable and Flat Cable | | DCN4-BR4D | Used as a set with a DCN4-TR4 when Thin Cable is branched on a branch line. |
| Power Supply Terminal Block with Terminating Resistance for Flat Cable | | DCN4-TP4D | Can be used to supply communications power from terminals when Flat Cable is used. |
| Flat Connector Socket | DCN4-TR4 | Used as a set with a DCN4-BR4 Flat Connector Plug in the following applications. • Extending the trunk line • T-branching the trunk line into branch lines | |
| | | Used alone in the following applications. • Connecting a DCN4-TM4 Terminating Resistor to the trunk line | |
| Flat Connector Plug | | DCN4-BR4 | Used as a set with a DCN4-TR4 Flat Connector Socket in the following applications. • Extending the trunk line • T-branching the trunk line into branch lines |
| Terminating Resistor | | DCN4-TM4 | Connector terminating resistor for flat cable. Attached to the DCN4-TR4 Flat Connector Socket at the end of the trunk line. |
| Flat Cable | | DCA4-4F10 | Four-core flat cable (UL 2555) Length: 100 m Conductor diameters: 0.75 mm ² x 2, 0.5 mm ² x 2 |
| Simple Manual Crimp Tool | | DWT-A01 | This is the crimping tool for the following connectors: • DCN4-TR4(-1) Flat Connector Socket • DCN4-BR4 Flat Connector Plug • DCN4-BR4D Conversion Connector for Standard Thin Cable and Flat Cable • DCN4-SF4D Connector for Flat Cable |

Specifications

• General-purpose Models (T-branch Taps)

| Rated current | Between main lines: 8 A (power supply line) and 2 A (signal line) |
|---|--|
| hated current | Between main and branch lines: 3 A (power supply line) and 1 A (signal line) |
| Insulation resistance | 100 MΩ min. (at 500 VDC) |
| Dielectric strength 500 VAC for 1 min, leakage current: 1 mA max. | |
| Ambient operating temperature 0°C to 55°C | |

Ordering Information

Ordering Information

International Standards

• The standards indicated in the "Standard" column are those current for UL, CSA, cULus, cUL, NK, and Lloyd standards and EC Directives as of the end of March 2009. (U: The standards are abbreviated as follows: U: UL, U1: UL Class I Division 2 Products for Hazardous Locations, C: CSA, UC: cULus, UC1: cULus Class I division 2 Products for Hazardous Locations, CU: cUL, N: NK, L: Lloyd, and CE: EC Directives

 Ask your OMRON representative for the conditions under which the standards were met.

EC Directives

The EC Directives applicable to PLCs include the EMC Directives and the Low Voltage Directive. OMRON complies with these directives as described below

EMC Directives

Applicable Standards EMI: EN61000-6-4

EMS: EN61131-2 and EN61000-6-2 (See note.) manufacturing installations. OMRON PLCs conform to the related EMC standards so that the devices and machines into which they are built can more easily conform to EMC standards. The actual PLCs have been checked for conformity to EMC standards. Whether these standards are satisfied for the actual system, however, much be deviced whether the current set.

must be checked by the customer. EMC-related performance will vary depending on the

configuration, wiring, and other conditions of the equipment or control panel in which the PLC is installed. The customer must, therefore, perform final checks to confirm that the overall machine or device conforms to EMC standards.

Note: The applicable EMS standard depends on the product

Low Voltage Directive

Applicable Standard: EN61131-2 Devices that operate at voltages from 50 to 1,000 VAC or 75 to 150 VDC must satisfy the appropriate safety requirements. With PLCs, this applies to Power Supply Units and I/O Units that operate in these voltage ranges. These Units have been designed to conform to EN61131-2, which is the applicable standard for PLCs.

List of Models

Masters

| Product | Appearance | Specifications | Model | Standards |
|----------------|------------|--|---------------|-----------------|
| DeviceNet Unit | | Model for CJ Series. Equipped with Master and Slave functionality. Control for up to 32,000 points per Master. | CJ1W-DRM21 | - UC1, N, L, CE |
| | | Model for CS Series. Equipped with Master and Slave functionality. Control for up to 32,000 points per Master. | CS1W-DRM21-V1 | 001, H, L, OL |

Note: Refer to the CJ1 Catalog (Cat. No. P052) for details on the CJ1. Refer to the CS1 Catalog (Cat. No. P047) for details on the CS1.

| Product | Appearance | Controller specifications | Display specifications | | Ethernet port | Model * | Standards |
|--|------------|--|---|---------------------|---------------|-------------------|----------------------|
| | | | Display device | Resolution | Ethernet port | WOUEI 🛧 | Stanuarus |
| NSJ-series Programmable Controller | | I/O capacity: 1280 points Program capacity: 60K steps Data memory capacity: 128K words (DM: 32K words, EM: 32K words x 3 banks) | 5.7-inch color High-Iuminance TFT LCD | 320 x 240 (QVGA) | 10/100Base-T | NSJ5-TQ11(B)-G5D | UC1, CE, UL Type4 |
| | | | 8.4-inch color TFT LCD | 640 x 480 (VGA) | 10/100Base-T | NSJ8-TV01(B)-G5D | UC1, CE |
| | | | 10.4-inch color TFT LCD | | 10/100Base-T | NSJ10-TV01(B)-G5D | UC1, CE, UL Type4 |
| | | | 12.1-inch color TFT LCD | 800 x 600 (SVGA) | 10/100Base-T | NSJ12-TS01(B)-G5D | |

* (B) in the model number indicates that the color of the Controller frame is black.

| Product | Appearance | Specifications | Model | Standards |
|-----------------|------------|---|-------------------------------|-----------|
| DeviceNet Board | | PCI Board I/O allocation space: 25,200 bytes Equipped with Master and Slave functionality | 3G8F7-DRM21 3G8F7-DRM21-E1 | U, C, CE |

Note: For information on the CJ1, refer to the CJ1 PLC Catalog (Cat. No. P052) and CJ2 PLC Catalog (Cat. No. P059).

Refer to the CS1 Catalog (Cat. No. P047) for details on the CS1. Refer to the C200HX/HG/HE Catalog (Cat. No. P036) for details on the C200HX/HG/HE.

OMRO

Software

How to Select Required Support Software for Your Controller

The required Support Software depends on the Controller to connect. Please check the following table when purchasing the Support Software.

| Item | Omron PLC System | Omron Machine Automation Controller System |
|------------|-----------------------------------|--|
| Controller | CS, CJ, CP, and other series | NJ-series |
| Software | FA Integrated Tool Package CX-One | Automation Software Sysmac Studio |

FA Integrated Tool Package CX-One

| Product name | Specifications | Number of licenses | Media | Model | Standards |
|---|--|------------------------|------------------|----------------|-----------|
| | The CX-One is a comprehensive software package that integrates Support Software for OMRON PLCs and components. | | | | |
| FA Integrated Tool Package CX-One Ver.4.⊡ | CX-One runs on the following OS. OS: Windows XP (Service Pack 3 or higher, 32-bit version) / Windows Vista (32-bit/64-bit version) / Windows 7 (32-bit/ 64-bit version) / Windows 8 (32-bit/64-bit version) / Windows 8.1 (32-bit/64-bit version) / Windows 10 (32-bit/ 64-bit version) | 1 license *1 | DVD *2 | CXONE-AL01D-V4 | |
| 14 M III II | CX-One Version 4. includes CX-Integrator Ver.3. For details, refer to the CX-One catalog (Cat. No. R134) | | | | |

Multi licenses (3, 10, 30, or 50 licenses) and DVD media without licenses are also available for the CX-One. The CX-One is also available on CD (CXONE-AL_C-V4). *1. *2.

Automation Software Sysmac Studio

Please purchase a DVD and required number of licenses the first time you purchase the Sysmac Studio. DVDs and licenses are available individually. Each model of licenses does not include any DVD.

| Product name | Specifications | Number of licenses | Media | Model | Standards |
|---|---|--------------------|-------|---------------|-----------|
| | The Sysmac Studio is the software that provides an integrated environment for setting, programming, debugging and maintenance of machine automation controllers including the NJ/NX-serie CPU Units, NY-series Industrial PC, EtherCAT Slave, and the HMI. | (Media only) | DVD | SYSMAC-SE200D | |
| Sysmac Studio Standard Edition Ver.1.⊡□ | Sysmac Studio runs on the following OS. OS: Windows 7 (32-bit/64-bit version) / Windows 8 (32-bit/64- bit version) / Windows 8.1 (32-bit/64-bit version) / Windows 10 (32-bit/64-bit version) | | | | |
| | The Sysmac Studio Standard Edition DVD includes Support Software to set up EtherNet/IP Units, DeviceNet slaves, Serial Communications Units, and Support Software for creating screens on HMIs (CX-Designer). For details, refer to the Sysmac Integrated Catalogue (P072). | 1 license * | | SYSMAC-SE201L | |

Multi licenses are available for the Sysmac Studio (3, 10, 30, or 50 licenses). *

OMROI

Introduction of the Switch Mode Power Supply

OMRON Switch Mode Power Supplies support a wide range of applications.

Madal

- Notifies you when the power supply needs maintenance, allowing maintenance at the optimum time. Helps reduce maintenance costs.
- Display monitor function makes it easy to check equipment startup.

Madel COVO

* Only on types with an indication monitor

Comparison to

Madel CO IV C

Simple power supply with a short body and easy installation: the ultimate in ease-of-use

- One of the shortest bodies in the industry makes it easy to design smaller and slimmer panels and devices.
- Front, top, DIN rail, and other installation types match the application and reduce installation man-hours.
- Fan-less up to 300 W, maintenance not necessary

Read and Understand this Catalog

Please read and understand this catalog before purchasing the product. Please consult your OMRON representative if you have any questions or comments.

Warranty and Limitations of Liability

WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall the responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

Application Considerations

SUITABILITY FOR USE

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of the product in the customer's application or use of the product.

At the customer's request, OMRON will provide applicable third party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the end product, machine, system, or other application or use.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses listed may be suitable for the products:

- Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this document.
- Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installations subject to separate industry or government regulations.
- Systems, machines, and equipment that could present a risk to life or property. Please know and observe all prohibitions of use applicable to the products.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

PROGRAMMABLE PRODUCTS

OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.

Disclaimers

CHANGE IN SPECIFICATIONS

Product specifications and accessories may be changed at any time based on improvements and other reasons. Consult with your OMRON representative at any time to confirm actual specifications of purchased product.

DIMENSIONS AND WEIGHTS

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

PERFORMANCE DATA

Performance data given in this catalog is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON Warranty and Limitations of Liability.

Note: Do not use this document to operate the Unit.
